South Island Health Services Plan 2016-19

Produced in May 2016

By the South Island Alliance Programme Office

On behalf of the five South Island District Health Boards

Telephone: 03 378 6631

PO BOX 639, Christchurch

## FOREWORD

This year the South Island Alliance will continue to dedicate its resources to achieve the South Island Outcomes Framework and drive improvement and efficiencies across the South Island health sector.

The South Island Alliance Board and Alliance Leadership Team support the South Island Alliance teams and health services in addressing the challenges we face within the region. We have made significant progress over the past five years in aligning systems and processes across the region leading to a better experience of care and outcomes for people. Examples of these include:

- *Health Connect South (clinical workstation) will roll out in the two remaining DHBs – it will be the first clinical workstation implemented regionally.*
- *We are implementing single regional services across multiple sites, for example, bariatric surgery.*
- *We continue to work towards meeting challenging targets, including shorter electives wait times and faster cancer treatment.*
- *Our workforce is becoming more skilled, more focused on patient centred care and more flexible through the programmes supported by the Workforce Development Hub.*

This *South Island Health Services Plan (2016-19)* maps the direction of the South Island Alliance and draws from national strategies and priorities, including the draft New Zealand Health Strategy, National Health Targets, the Minister's Expectations, and the Operational Policy Framework. The South Island Health Service Plan actions are interwoven into each of the South Island District Health Board (DHB) Annual Plans with a clear 'line of sight' across plans.

The plan provides direction and guidance in terms of how the South Island health system will operate and prioritise its resources and effort. The plan also continues to challenge how we work together while acknowledging the progress made and the efforts and energy of all involved.

Through the South Island Alliance, South Island health services have developed a strong platform for implementing regional and sub-regional priorities; health services can now work together to make the best use of available resources, strengthen clinical and financial sustainability and increase and improve patient access to services. We look forward to seeing this plan implemented and building on these actions in the coming years.

Signed by:

**Chris Fleming**  
Chair, Alliance Leadership Team  
CEO, Nelson Marlborough District Health Board

**Jenny Black**  
Chair, South Island Alliance Board  
Chair, Nelson Marlborough District Health Board

**David Meates**  
CEO, Canterbury and West Coast District Health Boards

**Peter Ballantyne**  
Chair, West Coast District Health Board

**Nigel Trainor**

**Kathy Grant**  
Commissioner, Southern District Health Board

## MINISTER OF HEALTH LETTER OF APPROVAL

## Office of Hon Dr Jonathan Coleman

Minister of Health  
Minister for Sport and Recreation  
Member of Parliament for Northcote

07 JUL 2016

Mr Chris Fleming  
Lead Chief Executive Officer for South Island Region District Health Boards  
Nelson Marlborough District Health Board  
Private Bag 18  
Nelson 7042

Dear Mr Fleming

**South Island Region 2016/17 Regional Service Plan**

This letter is to advise you I approve the 2016/17 South Island Regional Service Plan (RSP). I appreciate the significant work that is involved in preparing the RSP and thank you for your effort.

I am planning to strengthen the focus and role of RSPs in the future and you will be engaged in this process.

I acknowledge the good progress that has been made with regional planning this year, particularly in relation to the development of a strong regional vision, goals and outcomes. This is evident in the continued improvement in the alignment between the DHB Annual Plans and RSP, which should continue to be strengthened in the future in order to achieve the best use of resources.

As greater integration between regional DHBs supports more effective use of clinical and financial resources, I expect DHBs to make significant progress in implementing their RSPs during 2016/17 and to continue to work together to ensure service sustainability within the Region.

**Regional Service Plan Agreement**

Please note that my approval of your RSP does not constitute acceptance of proposals for service changes that have not undergone review and agreement by the Ministry of Health. You will need to advise the Ministry of any proposals that may require Ministerial approval as you review services during the year.

My agreement of your RSP also does not constitute approval for any capital projects requiring equity or new lending, or self-funded projects that require the support of the Capital Investment Committee. Approval of such projects is dependent on both completion of a sound business case, and evidence of good asset management and health service planning by your DHBs.

I would like to thank all the people involved in developing the RSP for their valuable contribution and continued commitment to delivering quality health care to the population. I look forward to seeing your achievements throughout the year.

Finally, please ensure that a copy of this letter is attached to the copy of your signed RSP held by each DHB Board and to all copies of the South Island RSP made available to the public.

Yours sincerely

Hon Dr Jonathan Coleman  
Minister of Health

cc DHB Chairs and Chief Executive Officers in the South Island Region

# 1 INTRODUCTION

“Steering the course for a sustainable future”

Our vision is a sustainable South Island health system, focused on keeping people well and providing equitable and timely access to safe, effective, high-quality services as close to people’s homes as possible.

## 1.1 The South Island context

With a total South Island population of 1,102,630 (23.4 percent of the total New Zealand population)<sup>1</sup>, implementing diverse, but similar individual responses duplicates effort and investment and can lead to service and access inequality. Regional collaboration is an essential part of our future direction.

The South Island Alliance has brought together the region’s five DHBs, along with primary care, aged residential care, NGOs and consumers, to work collaboratively toward a sustainable South Island health and disability system that is *best for people, best for system*.

Our vision to improve the patient journey and the health of the South Island’s population emphasises the provision of equitable and timely access to safe, effective, high-quality services, as close to people’s homes as possible. This vision is consistent with the draft New Zealand Health Strategy and the Government’s *Better, Sooner, More Convenient* approach to integrated health care.

To ensure our work remains aligned with this direction and to drive our activities, the South Island’s strategic framework identifies three strategic goals and eight collective outcomes that tell us what success looks like as a region.

To achieve these goals and outcomes, the South Island Alliance supports existing regional networks to be well-connected and integrated, align patient pathways, cut waiting times, improve quality and safety, and share information and resources. We are introducing more flexible workforce models and improved patient information systems to better connect the services and clinical teams involved in a patient’s care.

By using our combined resources and the strength and experience of our people, our health services can work towards this shared vision collaboratively. This collaborative approach will enable the region to respond with a whole of system approach to changes in technology and demographics that will significantly impact the health sector in coming years.

## 1.2 Our 2016-19 plan

This updated *South Island Health Services Plan (2016-19)* provides a framework for future planning and outlines the region’s priorities for 2016-19. It has been developed by the five South Island DHBs, and the primary care and community members of the South Island Alliance’s Service Level Alliances and Workstreams. The plan builds on the achievements and progress of the last five years as it develops a longer term direction for a sustainable South Island health and disability system that is *best for people, best for system*.

South Island health services continue to work together at a regional level to make the best use of available resources, strengthen clinical and financial sustainability and increase access to services. The plan, developed and supported by clinical leaders, supports the South Island Outcomes Framework (see Section 4 Improving Health Outcomes), and is governed by our agreed framework for regional decision making (see Section 5 Regional Governance, Leadership and Decision Making).

---

<sup>1</sup> Based on projections used for the 2016/17 Population Based Funding Formula.

South Island DHBs are involved in collaborative activity across a large number of regional and sub-regional service areas. The areas outlined in the plan are those that have been given national and regional priority. In addition to these priority areas, regional approaches continue for neurosurgery, primary care emergency planning and coordination, and audit services. Māori health approaches have been incorporated into the 2016-19 priority area workplans (Appendix 4).

Each priority area—whether supported by regional Service Level Alliance, Workstream or group—is clinically led, or, as for the Support Services Service Level Alliance, has clinicians involved in the teams and in all key decision making approaches. Members of the Service Level Alliances and other working groups come from each of the DHBs and provide breadth of expertise and ownership for development initiatives. The South Island Alliance Programme Office and a regional communication strategy support the activities across the South Island.

## 2 SETTING OUR STRATEGIC DIRECTION

### 2.1 Strategic context

New Zealand's health system is generally performing well against international benchmarks. However, an aging population and a growing burden of long-term conditions is driving increased demand for health services, while financial and workforce constraints limit increasing capacity.

Alongside these health sector drivers, there is growing acknowledgement of the social determinants of health and, conversely, the role good health plays in social outcomes. Health outcomes for our communities are interlinked with issues of education, employment, housing and justice, and services will increasingly be asked to take a broader view of wellbeing.

These pressures mean health services cannot continue to be provided in the same way. While hospitals continue to be a setting for highly specialised care, we need to move away from the traditional health model.

There are clear opportunities that are supporting evolution in our health sector, for example shifts towards earlier intervention, investment and preventative care, home and community based care, and new technology and information systems. Further change towards integrating and better connecting services, not only across the health sector but inter-sectorally, is needed to achieve better health outcomes with available resources.

### 2.2 National direction

Acknowledging these challenges and opportunities, New Zealand's long term vision for health services will be articulated through the New Zealand Health Strategy. The Strategy intends to support New Zealanders to 'live well, stay well, get well' and sets out five themes to give focus for change in health services:

- People powered: understanding people's needs and partnering with them to design services; empowering people to be more involved in their health and wellbeing; building health literacy and supporting people's navigation of the system
- Closer to home: more integrated health services and better connections with wider public services; investment early in life; care closer to home; focus on wellness and prevention
- Value and high performance: focus on outcomes, equity, people's experience, best-value use of resources; strong performance measurement; culture of improvement; transparent use of information to share learning; use of investment approaches to address health and social issues<sup>2</sup>
- One team: operating as a team in a high trust system; flexible use of the health and disability workforce; leadership and workforce development; strengthening the role of consumers/communities; linking with researchers
- Smart system: information reliable, accurate and available at point of care; data and systems that improve evidence-based decision making and clinical audit; standardised technology.

More specifically, health services are guided by a range of population or condition specific strategies, including He Korowai Oranga (Māori Health Strategy), 'Ala Mo'ui (Pathways to Pacific Health and Wellbeing), Health of Older People Strategy (currently being updated), Primary Care Health Strategy, Rising to the Challenge (Mental Health and Addiction Service Development Plan – to be updated in 2016), Palliative Care Strategy, Cancer Strategy and Diabetes Strategy.

---

<sup>2</sup> In line with the Productivity Commission's report *More Effective Social Services (2015)*, an investment approach takes into account the long-term impact of an initiative on government spending and quality of life when making funding decisions.

In supporting people to ‘live well, stay well, get well’<sup>3</sup>, DHBs are expected to commit to Government priorities to provide better public services; in particular, ‘better, sooner, more convenient health services’. However, the health sector also contributes to the achievement of other Government priorities, including a number of Better Public Service results areas, and building a more productive economy.

Alongside these longer-term commitments, the Minister of Health’s annual Letter of Expectation signals annual priorities for the health sector. In 2016/17 the focus is on:

- New Zealand Health Strategy: DHBs need to be focused on the critical areas to drive change that are identified in the Strategy
- Living within our means: DHBs must continue to consider where efficiency gains can be made and look to improvements through national, regional and sub-regional initiatives
- Working across government: cross-agency work to support vulnerable families and improve outcomes for children and young people is a priority, along with health’s contribution to Better Public Service Results
- National health targets: while health target performance has improved, this needs to remain a focus for DHBs, particularly the Faster Cancer Treatment target
- Tackling obesity: DHBs are expected to deliver on the new health target to address childhood obesity and show leadership in working to reduce the incidence of obesity
- Shifting and integrating services: DHBs need to continue to work with primary care to move services closer to home and achieve better coordinated health and social services
- Health information systems: DHBs need to complete current national and regional IT investments and DHB, PHO and primary care input is sought in the co-design process of the Health IT Programme 2015-2020.

### 2.3 Regional direction

The Nelson Marlborough, Canterbury, West Coast, South Canterbury and Southern DHBs form the South Island Alliance – together providing services for slightly over 1 million people, or 24 per cent of the New Zealand population.

In delivering its commitment to better public services and better, sooner, more convenient health services, the Government also has clear expectations of increased integration and regional collaboration between health service providers (and other social service agencies).

While each DHB is individually responsible for the provision of services to its own population, the South Island Alliance recognises that working regionally enables us to better address our shared challenges. The Alliance improves the systems within which health services are provided by the individual South Island DHBs. Now entering its fifth year, the Alliance has proven to be a successful model for the South Island, bringing clinicians, managers, CEOs, primary care, aged residential care and consumers together to work towards a shared vision of *best for people, best for system*. The model has become embedded in the culture of the South Island health system with regional and sub-regional activity ‘business as usual’.

The Alliance Outcomes Framework defines what success looks like for South Island health services, and outcomes measures will be implemented this year to track if we are heading in the right direction (further detail in Section 4: Improving outcomes for our population).

---

<sup>3</sup> In the Ministry of Health’s Statement of Intent this is articulated as: New Zealanders live longer, healthier, more independent lives and the health system is cost-effective and supports a productive economy (<http://www.health.govt.nz/publication/statement-intent-2015-2019>)

The *South Island Health Services Plan 2016-19* outlines the agreed regional activity to be implemented through our seven priority service areas: cancer, child health, health of older people, mental health and addiction, information services, support services, and quality and safety service level alliances. In addition to this, regional workstreams will focus on: cardiac services, elective surgery, palliative care, public health, stroke, major trauma services and hepatitis C. Workforce planning, through the South Island Workforce Development Hub will contribute to improved delivery in all service areas.

In developing and implementing a collective regional approach we acknowledge the unique pressures and post-disaster challenges Canterbury face, and the wider impact of this on South Island health services. Five years on from the earthquakes, prolonged levels of stress, anxiety and poor living arrangements are exacerbating chronic illness and increasing demand across the Canterbury health system. Patterns following other international disasters show that psychological recovery after a major disaster can take upwards of a decade, so the increased demand can be expected to continue for some time. Alongside this increased demand, invasive infrastructure repairs combined with extensive facilities redevelopment mean capacity is severely stretched across Canterbury's specialist services. It will be a number of years before Canterbury is back to full capacity and it is important that care pathways for the South Island are developed with this in mind.

All South Island DHBs are involved in the service level alliances and workstreams. Each DHB's commitment in terms of the regional direction is outlined in their Annual Plans. The South Island Alliance is committed to the implementation of the New Zealand Health Strategy regionally and is already delivering actions in line with the Strategy Roadmap and the 2016/17 priorities. This alignment is shown through a South Island version of the Health Strategy Roadmap of Actions diagram in Appendix 2.

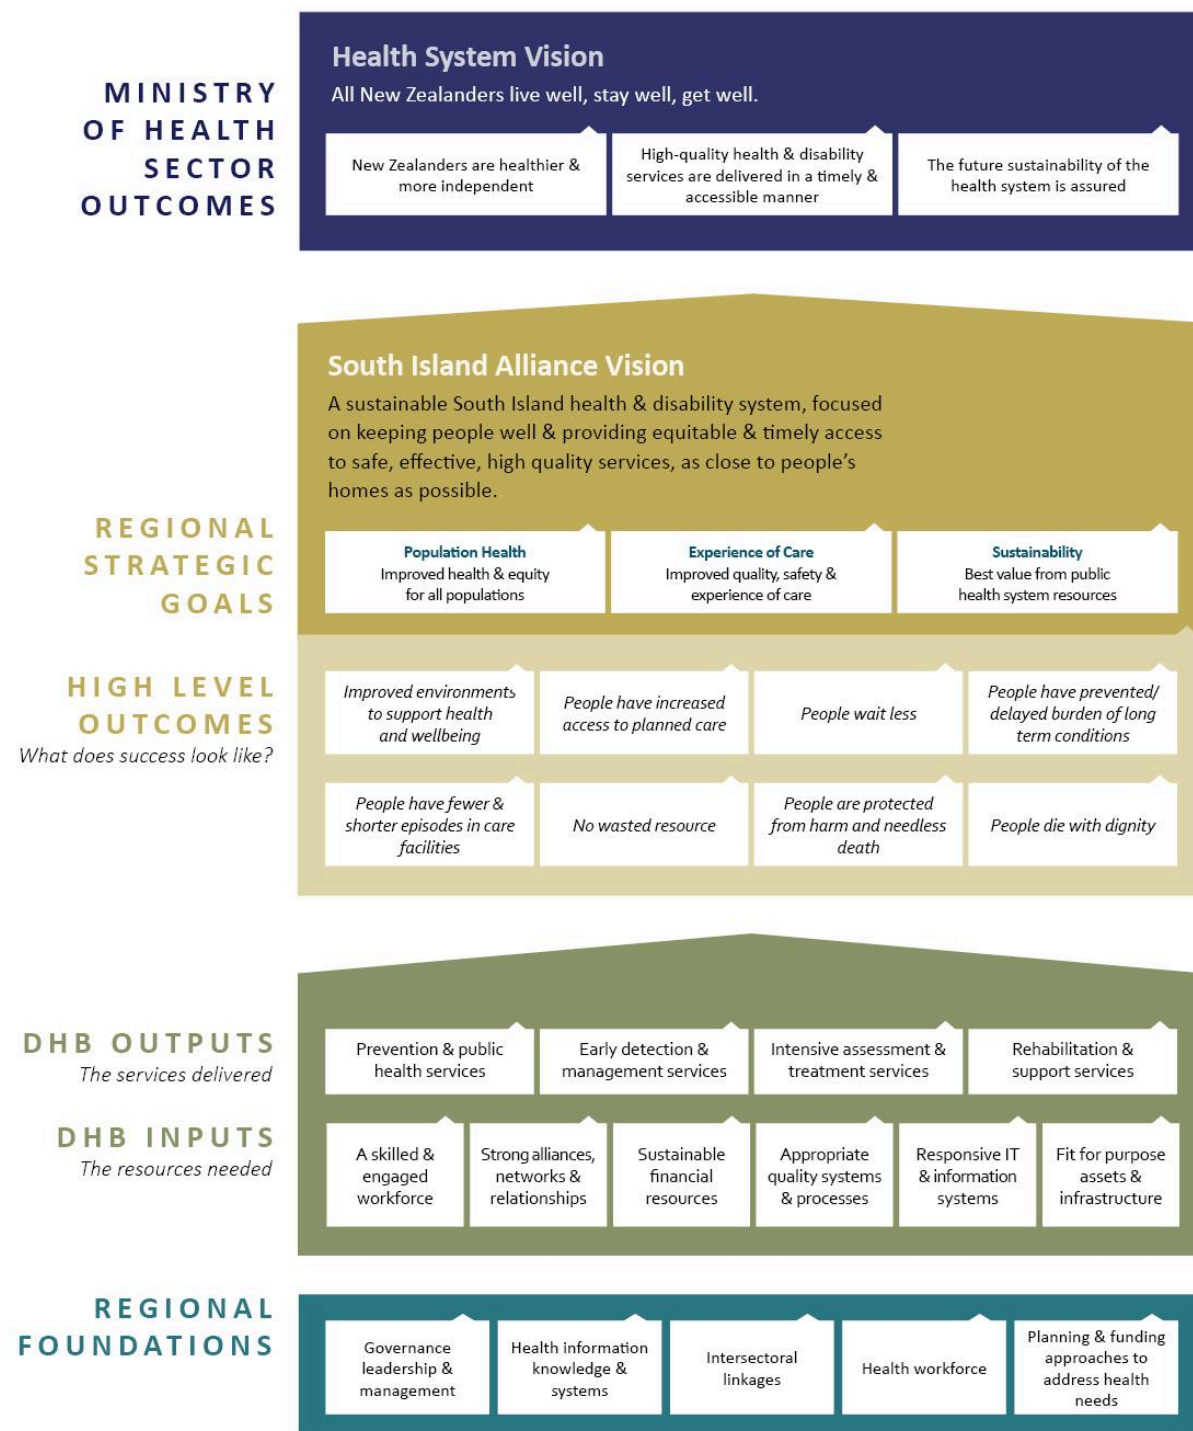

## 2.4 Local direction

Local health services must cope sustainably with the increasing demand for services and design pathways to manage the flow of people. Each DHB has local alliances through which they partner with primary care and other local stakeholders to drive local health service integration. These local alliances support health services to deliver care in the most appropriate setting and reduce demand by supporting people to remain independent.

While many of the challenges are similar, each DHB must address the particular needs of their community, given the demographics, infrastructure and geographic features that make up its district. We support working towards alignment and collaboration where possible, but recognise the need for flexibility to enable local solutions for local communities.

## 2.5 South Island intervention logic diagram

The strategic alignment of the South Island Alliance is described in the following intervention logic diagram.

### *Te Tiriti O Waitangi*

*We agree that the Treaty of Waitangi establishes the unique & special relationship between Iwi, Maori & the Crown. Parties with Treaty obligations will honour these when participating in Alliance activities.*

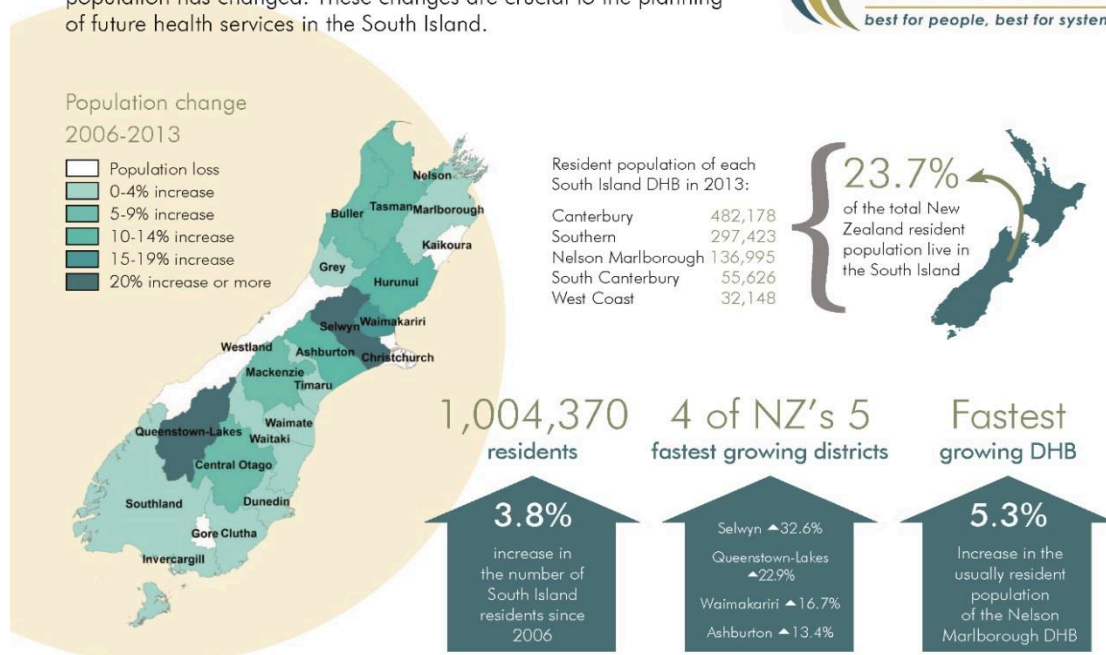

## 3 DRIVERS OF HEALTH SERVICE CHANGE IN THE SOUTH ISLAND

### 3.1 South Island population profile

The Population Based Funding Formula estimates the population of the South Island will be 1,102,630, in 2016/17, an increase of 59,380 people or 5.7 percent from the March 2013 Census. We expect the trends identified in the 2013 Census to continue in the coming year.

## WHAT THE 2013 CENSUS TELLS US

The census was held on the 5<sup>th</sup> of March 2013, two years after it was cancelled as a result of the 2011 Christchurch earthquake and seven years after the previous census. Results indicate how the profile of our population has changed. These changes are crucial to the planning of future health services in the South Island.

The South Island's usually resident population has increased by 3.8% since 2006. This is slower than the 6.7% between 2001 and 2006.

Four of the five fastest growing districts in the country are in the South Island. Queenstown-Lakes, Selwyn and Waimakariri were also the three fastest growing districts last census.

There has been population loss in three rural districts: Kaikoura, Westland and Gore. These are relatively small numbers, with a decrease of less than 100 usual residents in each.

The high growth in areas such as Queenstown-Lakes and Ashburton shows there is not necessarily a population movement away from rural districts and towards the cities.

The Clutha and Southland districts have seen growth between 2006 and 2013, following decreases in the 2001 census.

The growth in the Queenstown-Lakes district appears to be contributing to the growth in the Central Otago district. The increases in population have occurred in the Cromwell and Dunstan areas.

Nelson Marlborough has had the highest rate of growth in the South Island between 2006 and 2013. Over half of this growth has occurred in Nelson City.

Canterbury DHB previously had the highest rate of growth of the South Island DHBs. This was disrupted by the earthquakes in the region. Christchurch City has seen a 2% decrease in usual residents since 2006, contributing to accelerated growth in the neighbouring districts of Selwyn and Waimakariri. Much of the growth in these districts has occurred in Christchurch's satellite towns, including Rolleston, Rangiora and Lincoln. Whilst residents may have left Christchurch City after the earthquakes, many are still living in the surrounding area.

For example, Dunedin City has increased by 1,560 usual residents since 2006, comparable to the increase in the number of usual residents in the Central Otago and Southland districts.

#### What Does This Mean?

Population growth around the South Island. The population continues to increase in many rural areas of the South Island. Therefore, the provision of general practice in these areas is a key requirement, as well as mobile community services that operate in people's homes and communities.

#### Our aging population

The South Island has an increasing elderly population. While progress has been made to address the needs of older people, new service models will need to continue to be developed. The 25-44 year age group is an important age group for our health workforce. As this age group has declined since 2006 it may have implications our health workforce in the years to come.

## Age

The South Island is continuing to age, and remains older than the rest of the country with 16% of our population now aged 65+, up from 14.0% in 2006. The proportion of the New Zealand population aged 65 years or older is 14.3%.

South Canterbury continues to have the highest proportion of residents aged 65 years or older (20.4%). Nelson Marlborough DHB has the fastest growing older population, with the proportion increasing from 14.8% in 2006 to 18.6% in 2013.

The number of South Island residents in the 25-44 age group has declined since 2006. The 25-44 year age group represented 27.2% of the South Island resident population in 2006, which has decreased to 24.6% in 2013.

Canterbury DHB has the highest proportion of residents aged 25-44 years in the South Island. Because of the Canterbury DHB's relative size, this increases the South Island proportion.

### 16%

of South Island residents are aged 65+, up from 14% in 2006

### Fastest growing

65+ population of any South Island DHB is Nelson Marlborough

### 24.6%

of South Island residents are aged 25-44, down from 27.2% in 2006. This represents 16,400 fewer 25-44 year olds

### 8.7%

of South Island residents identify as Maori, a 1% increase since 2006

### 2.2%

of South Island residents identify as a Pacific Island ethnicity, a 1.9% increase since 2006

### 5.5%

of South Island residents identify as an Asian ethnicity, a 4.3% increase since 2006

## Ethnicity

The South Island population has become increasingly ethnically diverse since 2006. The proportion of the population that identify as Maori has increased from 7.7% to 8.7%. The proportion of the population that identify as a Pacific Island ethnicity has increased from 1.9% to 2.2%. The proportion of the population that identify as an Asian ethnicity has also increased, from 4.3% to 5.5%.

In contrast to the national population, the South Island continues to have a much higher proportion of the population that identify as European/New Zealander. 90.3% of South Island residents identify as European/New Zealander, compared with 75.7% nationally.

## Families

There has been no change in the number of families with dependent children in the South Island between 2006 and 2013. However, three South Island DHBs have seen a decrease in the number of families with dependent children: West Coast (4.7% decrease), Canterbury (1.2% decrease) and South Canterbury (2.1% decrease).

### No change

in the number of families with dependent children in the South Island, despite an increase in the number of households

### 15%

of South Island residents aged 15 years or older are regular smokers, down from 19.9% in 2006

Data source: Statistics New Zealand, Census of Population and Dwellings, 2013

## 3.2 The South Island Māori Population

# The South Island MĀORI POPULATION

The graphs and figures on these pages present key data from the 2013 Census.

Socioeconomic deprivation, employment, income, qualifications, home ownership, household crowding, and cigarette smoking all affect people's health and are often referred to as 'broader determinants of health'. Collectively, these determinants have a greater impact on the health of a population than the health system itself.

Māori generally have poorer health status than non-Māori. This health inequity can be partly attributed to the differences in access or exposure to the broader determinants of health illustrated in this document. Monitoring these differences is the first step towards addressing them.

South Island DHBs each have a Māori Health Action Plan and a Public Health Plan, which are companion documents to the Annual Plan. These documents set out key actions and performance measures to improve population health and reduce inequities, including work to influence the broader determinants of health.

# The South Island MĀORI POPULATION

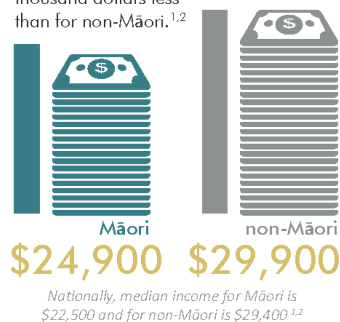

## Smoking

Smoking is the single biggest preventable cause of illness and death in New Zealand. While rates are slowly decreasing, there is a long way to go before New Zealand achieves the 2025 smoke free goal (less than 5% smokers).

## Income

Median income for Māori is several thousand dollars less than for non-Māori.<sup>1,2</sup>

<sup>1</sup> Aged 15 years and over.

<sup>2</sup> Median income is generally a better measure than average income because income data is heavily skewed; a small number of people have very high incomes compared to the majority. Therefore median income gives a better idea of the majority of people's actual income.

<sup>3</sup> The New Zealand Deprivation Index uses census data on personal and household income, employment, qualifications, home ownership, single parent families, household crowding, and access to a car and the internet at home, to attribute a deprivation level to small geographical areas, on a scale from 1 (least deprived), to 10 (most deprived).

<sup>4</sup> Taking into account the number of bedrooms, couples, single adults and the age and gender of children.

<sup>5</sup> Aged 20 years and over.

Data source: Statistics New Zealand.  
The 'Not Elsewhere Included' ethnicity category (5.4%) was excluded from all calculations.

## Deprivation

Māori are more likely to live in deprived<sup>3</sup> areas than non-Māori. 54.1% of South Island Māori live in deciles 6-10 compared to 37.9% of South Island non-Māori.

South Island DHBs & National NZDep2013 distribution

## Unemployment

The Māori unemployment rate is more than two times that of non-Māori.<sup>1</sup>

## Household crowding

Living in a crowded house is proven to increase the risk of catching and spreading serious infectious diseases.<sup>4</sup>

Māori are nearly three times as likely to live in crowded households.

Nationally, 20.0% of Māori and 7.9% of non-Māori live in crowded homes

## School qualifications

**43.4%**  
of Māori have a Level 3 Certificate at school or above<sup>5</sup>

**56.3%**  
of non-Māori have a Level 3 Certificate at school or above<sup>5</sup>

**non-Māori**

Nationally, 41.6% of Māori and 61.4% of non-Māori have a Level 3 certificate or above<sup>5</sup>

## Home ownership

Rates of home ownership have been falling in NZ since 1991. Māori are less likely to own, or partly own, their homes than non-Māori.<sup>1</sup>

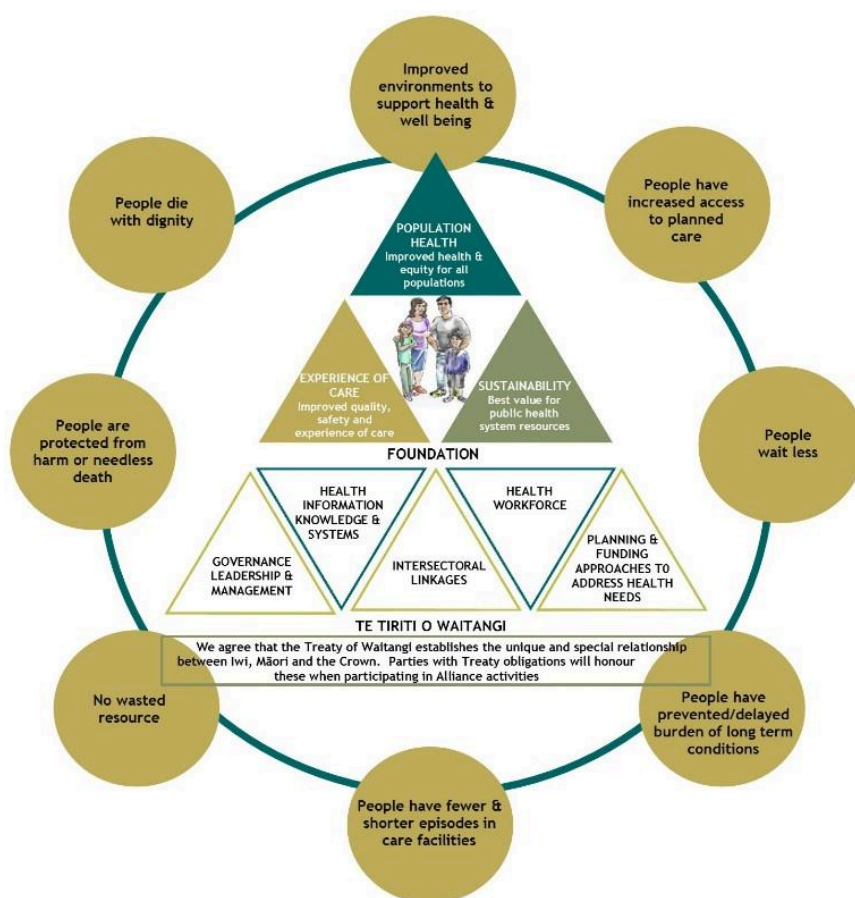

Nationally, 28.2% of Māori and 53.3% of non-Māori own, or partly own, their homes<sup>1</sup>

## 4 IMPROVING HEALTH OUTCOMES FOR OUR POPULATION

### 4.1 What are we trying to achieve?

Our health system is complex and continues to experience multiple challenges. Current challenges include: increasing patient complexity, increasing technology, a call for increased efficiency, transparency and accountability from society, changes in social demographics, and workforce shortages. To achieve integrated and coordinated care we need to support an environment that creates connectivity, alignment and collaboration within and between all parts of the health system and other related sectors.

The health sector is expected to deliver services that will achieve the vision of the New Zealand Health Strategy: *live well, stay well, get well* and to meet Government commitments to deliver ‘*better, sooner, more convenient health services*’.

To ensure we are aligned with this direction and to drive our activities, the South Island’s strategic framework identifies three strategic goals and eight collective outcomes that tell us what success looks like as a region.

The Alliance has developed a set of measures to track performance and demonstrate whether collectively, we are progressing towards our long term strategic goals and making a positive change in the health of the South Island populations.

There is no single measure that can demonstrate the impact of health services (or separate the impact of various health services), so a mix of population health and service access indicators are used to demonstrate improvements in the health status of the population and the effectiveness of the health system.

Long-term outcome indicators over 5-10 years in the life of the health system will measure change in health status over time, rather than reach a fixed target. A set of medium-term (3-5 years) indicators will be the primary means of gauging performance as change will be more evident in these.

These measures will be integrated into our planning and reporting in 2016-17.

## 4.2 How the Outcomes Framework aligns with service priorities

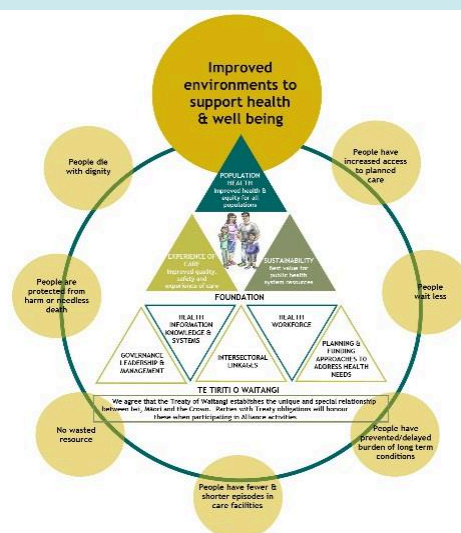

This section outlines why each of the eight collective outcomes is a priority for South Island health services, what activities the Alliance is undertaking to support each outcome, and how we intend to track progress. Further detail of the actions and deliverables can be found in the workplans in Appendix 4. Each of the priority areas that is supported by a Service Level Alliance or a workstream undertakes an annual work plan, with deliverables aligned to the South Island Outcomes Framework and national requirements.

### Outcome 1: Improved environments to support health and wellbeing

#### Why is this outcome a priority?

Health promotion and disease prevention contribute to improved health status and reduction of health inequalities, as well as reducing demand for healthcare services.

Tobacco smoking, inactivity, poor nutrition and rising obesity rates are major and common contributors to a number of the most prevalent long-term conditions. These are avoidable risk factors; preventable through a supportive environment, improved awareness and personal responsibility, for health and wellbeing. Supporting people to make healthy choices will enable our population to attain a higher quality of life and avoid, delay or reduce the impact of long-term conditions.

#### What actions are we taking to address this outcome?

##### Public Health

##### Health determinants

- Develop consistent South Island approaches to address: water fluoridation; air quality and warm homes; and sweetened drinks
- Contribute to the Alcohol Harm Reduction Emergency Department Project
- Identify coordinated regional opportunities to promote healthy eating and active lifestyles

##### Environmental Sustainability

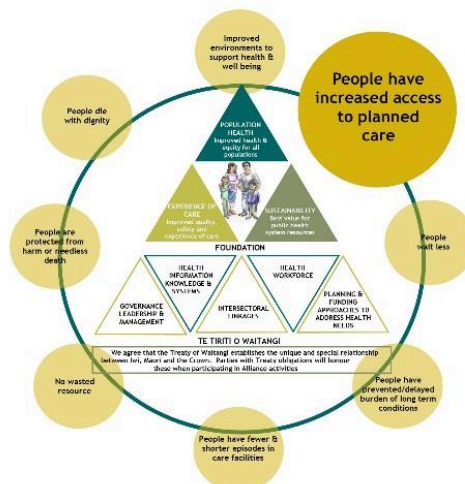

- Promotion of consistent environmental sustainability monitoring systems
- Develop a South Island approach to environmental sustainability

## Outcome 2: People have increased access to planned care

### Why is this outcome a priority?

Improving access to planned care, rather than emergency care, is important for patients. By providing planned access to services, people suffering from health conditions can get better, timelier care; allowing them to regain their quality of life sooner. This may also allow people to resume or maintain their productive contribution to the community.

In personalised care planning, clinicians and patients work together using a collaborative process of shared decision-making to agree goals, identify support needs, develop and implement action plans, and monitor progress. This is a continuous process, not a one-off event.

### What actions are we taking to address this outcome?

#### Cardiac Services

*Improved outcomes for people with suspected acute coronary syndrome*

- Support access to angiography for high risk populations groups

#### Electives Services

*Improve access to elective services*

- Improved equity of access to elective services – in particular, bariatric surgery, urology, infertility, plastics services, vascular services, eye services and maxillofacial services

#### Cancer Services

*People get timely access across the whole cancer pathway*

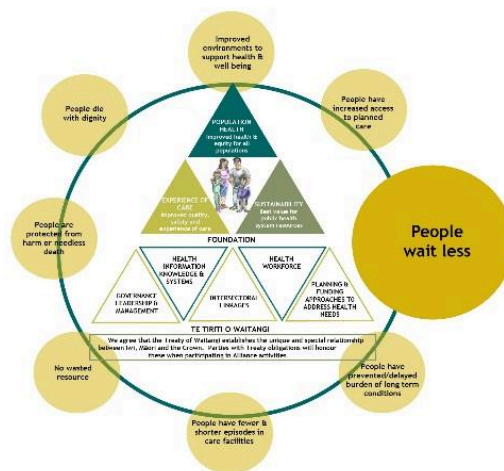

- Supporting the South Island-wide review of services against national tumour standards, with a focus on supportive care, palliative care and equity
- Multi-disciplinary meetings (MDMs) rolled out across the region, supporting quality decision making and a coordinated, planned approach to care
- Routes to Diagnosis project to understand how people are accessing cancer services. The initial focus is on those who first present through ED

## Outcome 3: People wait less

### Why is this outcome a priority?

Delayed access to medical care may subject patients to increased pain, suffering, and mental anguish. Waiting for healthcare can also have broader economic consequences, such as increased absenteeism, reduced productivity, and reduced ability to work. The individual waiting is affected, as well as family members and friends who are concerned or may be called to assist them with activities of daily living. Waiting may also lead to poorer care outcomes and a requirement for more complex treatments as a result of deterioration in the patients' condition while waiting for treatment.

Health services must value people's time. By looking at the how, where, when and who of care provision and looking at it from the patient's perspective, we can remove barriers and make the system more integrated. This focus improves quality and efficiencies and supports our 'best for people, best for system' approach.

### What actions are we taking to address this outcome?

#### Cardiac Services

- Implement an agreed cardiac model of care to ensure all patients get consistent, timely care

#### Cancer Services

*People get timely services across the whole cancer pathway*

- Working with DHBs to understand barriers to achieving the Faster Cancer Treatment health target and overcoming these

#### Information Services

##### *South Island Patient Information Care System (SI PICS)*

- Supporting the implementation of SI PICS in Canterbury and Nelson Marlborough DHB sites
- Preparing for implementation of SI PICS in other DHBs
- Emergency Department Information Solution*
- Provide a regional solution to support visibility of ED activity

##### *eReferrals*

- Implement a regional eTriage module in Health Connect South that provides the electronic triage functionality

#### Stroke Services

*Ensure rapid access to treatment for potential thrombolysis candidates*

- Each South Island DHB has a system to rapidly confirm a diagnosis of stroke and identify patients who may benefit from thrombolysis therapy
- Support all South Island DHBs to implement stroke thrombolysis pathways

#### Support Services

- Facilitate and review regional inter-hospital transfer agreement with St John that improves efficiency and service for patients and hospitals

#### Workforce Development Hub

- Implementation of allied health assistants Level 3 training to up-skill and increase flexibility of the workforce
- Support flexibility and integration in the workforce by introducing a regional clinical allied health leadership role
- Implement a workforce redesign and delegation model (Calderdale Framework) to enable allied health professionals to skill share across professions and safely delegate to kaiāwhina (allied health assistants)

#### Major Trauma

*A planned and consistent approach to major trauma services*

- Implement agreed regional and local trauma systems

#### Elective Services

- Supporting DHBs to meet ESPI indicators

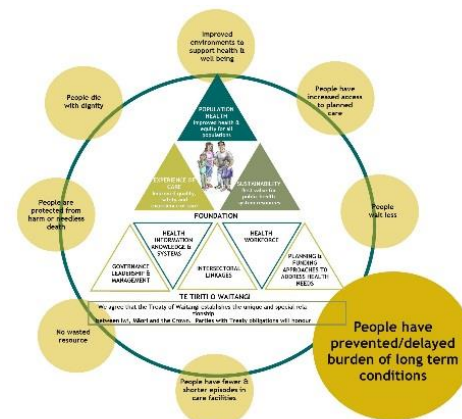

## Outcome 4: People have prevented and/or delayed burden of long term conditions

### Why is this outcome a priority?

Chronic diseases are now the most common cause of death and disability. People with chronic diseases tend to be high users of healthcare resources and social care. The prevalence of long-term conditions rises with age and many older people have more than one chronic condition.

The World Health Organisation (WHO) estimates more than 70 per cent of all health funding is spent on long-term conditions. As our population ages, the incidence and burden of long-term conditions increases. Long-term conditions are also more prevalent amongst Māori and Pacific people and are closely associated with significant disparities in health outcomes across population groups.

It is now widely recognised that the care and support needed to live with a long-term condition requires a radical re-design of services, allowing patients to drive the care planning process. By intervening early, and with improved coordination and proactive provision of care, people, families and whānau with complex conditions have improved health outcomes. This supports people to stay well and maintain their functional independence.

### What actions are we taking to address this outcome?

#### Stroke Services

##### *Rapid access to treatment for potential thrombolysis candidates*

- Each South Island DHB has a system to rapidly confirm a diagnosis of stroke and identify patients who may benefit from thrombolysis therapy and this system is implemented in each South Island DHB
- Implement stroke thrombolysis pathways
- Optimise outcomes for all patients with stroke in rural and urban locations

##### *Integrated Stroke Rehabilitation Services*

- Community stroke rehabilitation is available to aid adjustment and minimise complications

#### Child Health

##### *Interventions to reduce hospital admissions*

- Implement a South Island Health Pathway for dermatitis and eczema
- Increase GP training on dermatitis and eczema

##### *A regional integrated healthy weight (obesity) management programme*

- Develop a regional integrated healthy weight (obesity) management programme
- Enhance collaboration with child dental health services

#### Health of Older People

##### *Dementia services*

- A Cognitive Impairment Pathway (CIP) will be promoted for adoption across all South Island DHBs
- Improved services for people with dementia by implementing the *New Zealand Framework for Dementia Care* in the South Island
- Develop appropriate dementia education/training materials for South Island primary healthcare person-centred care

##### *Restorative Consensus Statements*

- Development of evidence-based statements to help guide service providers and consumers

#### Cancer Services

- Working with primary care to increase the timely identification of melanoma and reduce unnecessary removal of lesions
- Improve the uptake of cervical screening among Māori women

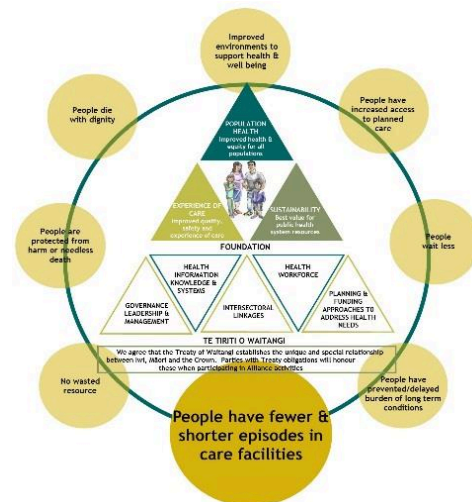

## Outcome 5: People have fewer and shorter episodes in care facilities

### Why is this outcome a priority?

Reducing the length of stay in healthcare facilities will release capacity in the system, including beds and staff time, which helps to minimise waiting times, maximise productivity and improve the patient experience.

Advancements in medical and health technology have enabled the population to live longer. However, more people are living with co-morbidities and need complex care interventions. We know that investing in community services and the community workforce will help to deliver positive health outcomes and free hospitals to provide more acute and specialised care.

This approach also reduces average hospital length of stay, increases patient choice and satisfaction, improves health outcomes, reduces unscheduled healthcare use, embraces prevention and health promotion models, delivers care closer to people's homes and saves money.

### What actions are we taking to address this outcome?

#### Cardiac Services

##### Heart failure

- Implement agreed protocols to ensure optimal management of patients with heart failure

#### Major Trauma

##### Improve the pathway for patients with major trauma

- Develop and implement regional destination policies in collaboration with DHBs, ambulance, and air transport providers
- Gain understanding of major trauma patient pathways by implementing a national major trauma registry

#### Health of Older People

##### Comprehensive clinical assessment (interRAI)

- Comprehensive clinical assessment using a standardised assessment tool (interRAI) facilitating a system-wide approach to common assessment
- Monitor population and service data trend to influence changes in service through advocacy

#### Child Health

##### Reduce hospital admissions

- Strengthen models of care within primary care – right place, right time, right service

##### Diabetes

- Establish a South Island Diabetes Working Group to improve systems across South Island for young people with Diabetes, in particular Type 1

#### Mental Health and Addiction

##### Access to youth forensic services

- Development of community youth forensic services.

##### Mental health and intellectual disability dual diagnosis

- Identify options to support consumers with mental health and intellectual disability dual diagnosis who are inappropriately placed.

##### Forensic services

- Improved adult forensic service capacity and responsiveness.

##### Access to mental health services

- Monitor and support ongoing improvements in the regional provision of eating disorder services, mothers and babies' services, and alcohol and other drug services

#### Quality and Safety

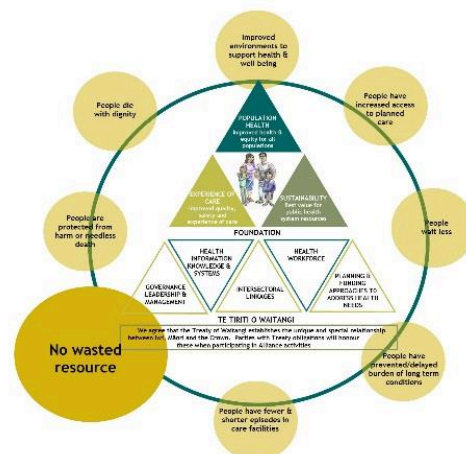

- Reduce complications resulting from being in hospital through ongoing quality and safety initiatives, such as improved hand hygiene and prevention of surgical site infections

## Outcome 6: No wasted resource

### Why is this outcome a priority?

We have an obligation to provide health services in the most efficient way possible, so patients receive timely access to the most appropriate care, in the most appropriate place. It's about getting the greatest value for our people from the system, enabling evidence to inform how our scarce healthcare dollars are best invested and ensuring people receive the care they need as close to home as possible.

As our population ages, so does our workforce. Alongside the other drivers of change in the health sector, the changing demographics of the workforce will require us to think differently about the way staff are utilised. We need to enable health professionals to work at the top of their scope of practice with the support of an appropriately trained unregulated workforce. We need to build an innovative and flexible workforce that will support the emerging models of healthcare.

### What actions are we taking to address this outcome?

#### Workforce Development Hub

##### *Build capacity of the workforce to work flexibly and efficiently*

- Implement a workforce redesign and delegation model (Calderdale Framework) to enable allied health professionals to skill share across professions and safely delegate to Kaiawhina (allied health assistants)
- Facilitate community based attachments for junior doctors (PGY1/2)
- DHBs supported to integrate the increased number of PGY1 (NZ citizens and permanent residents) into the workforce

#### Cardiac Services

##### *ECG storage and sharing*

- A common regional method of storing and sharing ECGs

#### Support Services

##### *Procurement and savings*

- Aggregate procurement requirements and improve purchasing power
- Savings achieved enabling redeployment of funds to appropriate services
- Increased rationalisation and standardisation of products and services

#### Workforce Development Hub

##### *eLearning*

- Implement a common eLearning platform for the South Island workforce
- Nursing Community of Practice has identified and prioritised a regional suite of eLearning packages

##### *Interprofessional*

- Increase opportunities for inter-professional learning in a clinical environment

#### Information Services

##### *HealthOne*

- Complete the roll-out of HealthOne to SDHB
- Complete the roll-out of HealthOne to the Marlborough PHO (NMDHB)

#### Cancer Services

- Using clinical time effectively to support better patient care through Multidisciplinary Meetings
- Working with primary care to promote early diagnosis and care closer to home through the Melanoma project (also reducing unnecessary removal of lesions) and the Route to Diagnosis project

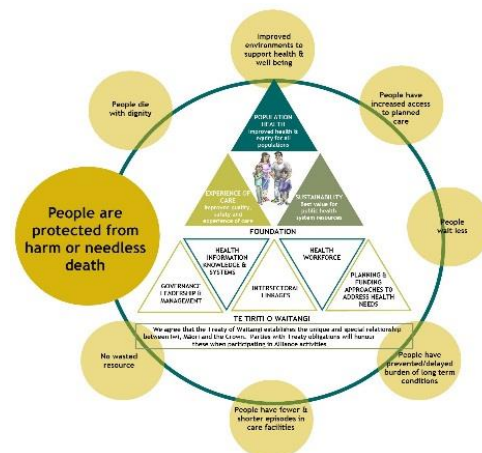

## Outcome 7: People are protected from harm or needless death

### Why is this outcome a priority?

It is fundamental to health service provision that people receive high quality, safe care and are protected from harm. This is implicit in the high trust relationship between patients and health professionals and is regulated through legislation and professional oversight. As well as the negative impact on patients, adverse events and delays in treatment drive unnecessary costs and redirect resources away from other services.

Quality improvement in systems and processes increase patient safety, reduce the number of events causing injury or harm and improve health outcomes. Our focus on *'best for people, best for system'* places an emphasis on the system of care delivery that prevents errors; learns from the errors that do occur; and is built on a culture of safety that involves healthcare professionals, organisations, and patients.

### What actions are we taking to address this outcome?

#### Child Health

##### *Improve Sudden and Unexpected Death in Infants (SUDI) rates*

- Implement the findings of the audit of the SI sudden death in infancy policy

##### *South Island Children's Action Plan*

- Agree South Island regional interventions to better manage safety, reduce family violence and childhood poverty

##### *Programmes to reduce youth risk taking*

- In partnership with Health Promotion Agency, South Island Public Health Partnership and the Mental Health and Addictions Service Level Alliance, implement the findings of the South Island Emergency Department scoping exercise

#### Health of Older People

##### *Falls prevention and fracture liaison service*

- Development of an evidence based Fracture Liaison Service
- Agree a South Island policy on community based falls prevention programmes based on the evidence of the Otago Exercise Programme

##### *Dementia Services*

WiAS programme continues to be expanded in each South Island DHB, reaching a wider range of staff working with people with dementia

#### Information Services

##### *eMedicines*

- SDHB, CDHB, SCDHB ePrescribing and administration project complete
- WCDHB, NMDHB ePrescribing and administration implementation commenced
- Complete the implementation of eMedicines reconciliation within Canterbury DHB and commence implementation planning for remaining South Island DHBs
- Complete the regional implementation by implementing ePharmacy Management within South Canterbury, West Coast, Southern and Nelson Marlborough DHBs

#### Information Services

##### *Health Connect South*

- Complete Southern and Nelson Marlborough DHB's Health Connect South implementation
- Implement a regionally agreed electronic discharge summary
- Develop and pilot a mental health solution

##### *South Island Patient Information Care System (SI PICS)*

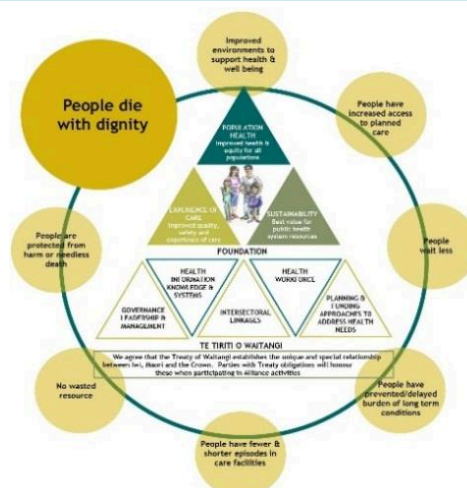

- Supporting the implementation of SI PICS in Canterbury and Nelson Marlborough DHB sites
- Preparing for implementation of SI PICS in other DHBs

## Outcome 8: People die with dignity

### Why is this outcome a priority?

For many people, end of life is a time of increased interaction with health services and can be a frightening and stressful time for patients and their whānau. While preventing pain and suffering underlies all healthcare and treatment, different people will have different views on what this means in terms of level of medical intervention and what setting they want to be in at the end of their life. It is important that health services support patients to die with dignity by enabling them to understand their options and respecting their needs.

### What actions are we taking to address this outcome?

## 5 REGIONAL GOVERNANCE, LEADERSHIP AND DECISION MAKING

### 5.1 The role and scope of the South Island region

“Our purpose is to lead and guide our Alliance as it seeks to improve health outcomes for our populations. We aim to provide increasingly integrated and coordinated health services through clinically-led service development and its implementation, within a ‘best for people, best for system’ framework.”

#### 5.1.1 Regional governance and leadership

In order to advance the implementation of regional service planning and delivery, in 2011 the South Island DHBs established an alliance framework. This approach continues to facilitate the DHBs in working together to jointly solve problems by sharing knowledge and resources with a focus on achieving the best outcomes for the region’s population. The alliance framework has been successful in supporting the DHBs to achieve in both the enabler and clinical service areas and has been recognised as a successful model at a national level and by the other regions.

### 5.2 Our governance structure

The South Island Alliance focuses South Island DHB collaboration through:

- An Alliance Board (the five South Island DHB board Chairs) that sets the strategic focus, oversees, governs, and monitors overall performance of the Alliance
- An Alliance Leadership Team (the South Island DHB CEOs) that prioritises activity, allocates resources (including funding and support) and monitors deliverables
- A Regional Capital Committee (SIA Board and Alliance Leadership Team) that reviews capital investment proposals in accordance with the agreed regional service strategy and planning
- A Strategic Planning and Integration Team (SPaIT) (Clinical and management leaders) that supports an integrated approach, linking the Service Level Alliances (SLA) and workstreams to the South Island vision, identifying gaps and recognising national, regional and district priorities
- The South Island Planning and Funding Network (SIP&FN) supports regional alliance issues and collaborates on non-alliance issues, including strategic planning, meeting of government priorities, statutory requirements, and provides whole of population funding advice.

#### *South Island Alliance Charter Principles*

- *We will support clinical leadership, and in particular clinically-led service development;*
- *We will conduct ourselves with honesty and integrity, and develop a high degree of trust;*
- *We will promote an environment of high quality, performance and accountability, and low bureaucracy;*
- *We will strive to resolve disagreements cooperatively, and wherever possible achieve consensus decisions;*
- *We will adopt a people-centred, whole-of-system approach and make decisions on a best for system basis;*
- *We will seek to make the best use of finite resources in planning health services to achieve improved health outcomes for our populations;*
- *We will balance a focus on the highest priority needs in our communities, while ensuring appropriate care across all our rural and urban populations;*
- *We will adopt and foster an open and transparent approach to sharing information; and*
- *We will actively monitor and report on our alliance achievements.*

### 5.3 Service Level Alliances (SLA) and workstreams

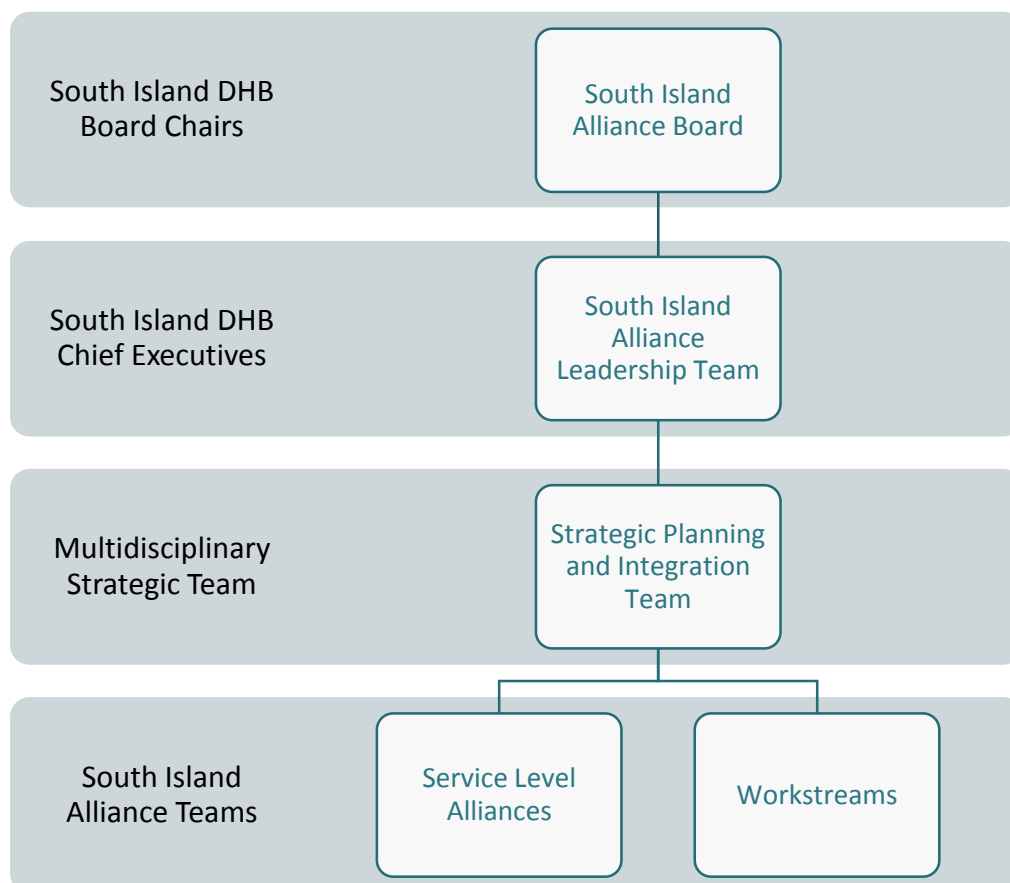

South Island regional activity involves a wide representation of the key stakeholders including health professionals, managers, funders, healthcare providers and consumers. The teams are clinically-led with the exception of the Support Services Service Level Alliance.

A chief executive or senior executive from one of the DHBs sponsors each SLA/workstream to support the team and where necessary help manage risks. Sponsors also provide a point of escalation for the resolution of issues if one of the agreed programmes or projects vary from planned time, cost or scope.

Each Service Level Alliance and Workstream also has a member of the Strategic Planning and Integration Team involved, either as a member or as a link person. This is a new initiative for 2015/16 and the key function for the increased linkage is to provide feedback and guidance on the strategic direction of the group and to understand any proposals / recommendations in order to better support the sign-off process at Strategic Planning and Integration Team and Alliance Leadership Team meetings.

While leadership training and support is provided at a DHB level, the South Island Alliance also supports Chairs and facilitators through the process and specifically at an annual meeting where the direction of the Alliance is discussed and a focussed topic is workshopped.

The SLA/workstream is responsible for overseeing the agreed programme of work, and providing overarching programme and project governance. The work is supported by the staff employed by the South Island Alliance Programme Office.

## 5.4 Decision making

The South Island Alliance approach to decision making and the process for resolving disputes is detailed in the South Island collective decision making principles (Appendix 2).

The foundation of the South Island Alliance is a commitment to act in good faith to reach consensus decisions on the basis of *'best for people, best for system'*.

It is acknowledged that there may be areas within the scope of the activities of the Alliance where a particular DHB either may wish to, fully or partially, be excluded from the Alliance activities. It is agreed and written into the Charter that each Board will have this option at the time of commencing, however, once agreed, the Board will be bound to operate within the scope and decision making criteria agreed. Any DHB intending to exercise this right will do so in good faith and will consult the other South Island DHBs before exercising this right.

### 5.4.1 Escalation pathway

The Alliance operates under the following escalation pathway:

- Operational group (including SLA/workstreams) to Alliance Leadership Team (South Island DHB CEOs);
- Alliance Leadership (South Island DHB CEOs) to Alliance Board (South Island DHB Chairs); and
- Alliance Board (South Island DHB Chairs) to Shareholding Ministers.

## 5.5 Regional funding and approval model

All work undertaken by the South Island Alliance must address one or more of the eight outcomes. The region is acutely aware of the fiscal constraints impacting health services and the need to focus on innovation, service integration, improved efficiency and reduced waste to support provision of high quality care. Proposals for regional activity must clearly identify the value proposition for patients and/or the system. The Strategic Planning and Integration Team review all workplans prior to any funding bids.

As the workplans are developed and endorsed, resource requirements are identified and a budget bid process is undertaken with the South Island General Managers Planning and Funding. This allows bids to be prioritised against national, regional and local priorities. Bids are identified that are supported subject to the DHB funding package and, where requested for significant and/or multi-year investments, a fully costed proposal or business case. A final recommendation to the South Island Alliance Team is made when the DHB funding package is known and the GMs Planning & Funding have endorsed the recommendations.

Regional activity that needs project or capital funding for Information Service and other capital investments involves discussions with South Island General Managers Planning and Funding and South Island Chief Financial Officers. A recommendation is then made to the South Island Alliance Leadership Team or Regional Capital Committee (if greater than \$500k) for approval.

The South Island Alliance Programme Office manages the operational budget for the Programme Office activities, including facilitation for the regional planning activities as outlined in the South Island Health Services Plan. The DHBs fund the Programme Office on a PBFF basis.

## 5.6 Managing our risk

The South Island DHBs have strengthened their ability to manage risk through their increased regional approach to health service planning and delivery. Enhanced relationships, greater collaboration and having regional systems and processes in place all help to better manage the issues and challenges the South Island DHBs experience locally, and regionally.

### 5.6.1 Risks and challenges to South Island health services

#### Christchurch earthquakes

While the repair and redevelopment is gathering momentum, the capacity of the Canterbury health system will continue to be significantly influenced by the following factors for a number of years:

- Prolonged levels of stress, anxiety and poor living arrangements are exacerbating chronic illness and increasing demand. For example, there has been a sharp increase in demand for mental health services: over the three years to December 2015, there was a 77 percent increase in rural presentations to specialist mental health services and a 60 percent increase in child and youth presentations to community mental health services.
- There continues to be uncertainty about the influx of people into Christchurch. Statistics projections do not appear to fully account for the rebuild population, however spikes in demand are clearly being felt. Between 2011/12 and 2014/15 the census population aged 25-29 increased by 10 percent, but emergency department presentations for this age group increased by 38%. Over the same period there was a 370 percent increase in the number of people from overseas presenting in emergency departments.
- Damage to health infrastructure was extensive, and repair strategies are not simple. Invasive repairs are having to be carried out by relocating and shifting patients and services in and out to repair rooms and buildings. This not only disrupts the continuity of care, but complicates the operating environment and adds additional cost to service delivery. Theatre and bed capacity is reduced and Canterbury DHB is hiring theatres and outsourcing some surgeries to meet demand and delivery expectations.
- Canterbury's situation is further exacerbated by the unanticipated funding interplay between fluctuating population projections and the national population based funding formula. The formula was never designed to deal with the dynamic population shifts and demand being experienced and calculations of deprivation levels are also considered questionable in an environment of rapid migration.

#### South Island demographics and population shifts

It is well acknowledged that the South Island has an older population than the rest of New Zealand, and consequently an older workforce, which will challenge the way health services are provided in the future. Alongside these macro level demographic changes, shifts in population location will also impact on health service provision in the medium to long term. While total population growth is slightly lower in the South Island than other regions, there is significant internal population movement, resulting in pockets of high population growth such as in Selwyn, Queenstown-Lakes, Waimakariri, Ashburton and Tasman.

Addressing how and what services to provide in areas that did not previously have a significant population base, along with the necessary investment in health infrastructure, will be a significant challenge for the South Island in the medium to long term.

#### Vulnerable and small services

The South Island has a number of health services that are vulnerable due to difficulty to staff, current service provision being unsustainable, or low numbers of patients. Developing sustainable models of care needs to balance demand for services, workforce issues, quality of care, and competing priority for health resources, as well as community views on access to services and the drive to keep services closer to home.

#### Financial sustainability

All South Island DHBs are experiencing significant financial constraint as they respond to increasing demands on health services, and rising workforce and other resource costs, within relatively static funding envelopes.

**Hospital redevelopment**

In addition to the significant construction work planned or underway across a number of Canterbury hospital sites and at the Grey Base Hospital in Greymouth, over the next 10 years both Dunedin and Nelson Hospitals will be redeveloped as they are both nearing the end of their economic life and are no longer fit for purpose. Although not driven by natural disaster as in Canterbury, the Dunedin and Nelson Hospital redevelopments will have similar significant financial and capacity consequences for a number of years. Dunedin Hospital, as one of the South Island's larger hospitals and reduced capacity may have an impact on the rest of the region.

**5.6.2 Regional collaboration mitigating impacts**

Our regional approach will help to support the management of the South Island's risks and challenges. The Service Level Alliance and workstreams we have in place, particularly around workforce issues and information services mitigate some of the risks health services are facing. We continue to build on the alignment of support services, such as human resources and procurement.

To ensure we have a clear understanding of the particular challenges faced by each district, in 2016, the Alliance Leadership Team will hold one of their monthly meetings in each DHB. This will provide the opportunity to discuss what is working well for the host DHB, and get an in-depth understanding of issues that need to be addressed. It is planned that the Strategic Planning and Integration Team and some DHB executive team members also attend. Travelling to each district is a significant commitment and represents the next step in ensuring we collectively understand the risks facing South Island health services and work collaboratively to manage these challenges.

## Appendix 1 – Regional Collective Decision Making Principles

### South Island collective decision making principles

#### Decision Making Principles

- The parties will be proactive to ensure that decisions required are made in a timely manner. Where delays in decision making are unacceptable to any of the DHBs, they can trigger escalation.
- Decisions will be taken at the lowest level that meets individual DHBs delegated authority policy requirements, and escalation will only be used if agreement cannot be reached after reasonable attempts to resolve disagreement.
- Where decisions are required of the Chief Executive Group and beyond, documentation will include detailed cost benefit analysis and an impact analysis which demonstrates both the collective and individual DHB impacts. Evidence that the South Island CFO's have supported the cost benefit analysis, and that the relevant Senior Leadership (such as GM's Planning and Funding, COO's, HR, CMO's, DON's etc.) have supported the robustness of the impact analysis and recommendations will be included in the papers.
- As much advance notice of decision making requirements will be given as possible. This is particularly pertinent where the decisions are significant or it is reasonably foreseeable that there will be either divergent views or significant stakeholder interest. Advance notice will be considered as a part of the relevant groups planning processes.
- Where a decision is required to be made, this will be noted through the appropriate agenda, together with supporting papers, distributed with no less than five working days' notice, unless shorter notice is supported unanimously by the parties making the decision.
- Decisions will be by consensus.
- In the event that a DHB is unable to attend the meeting, either through the substantive member or an alternate, the relevant DHB will either appoint a proxy or they will subsequently confer with the Chair of the meeting to determine whether they can support the consensus reached by the attending parties
- It is noted that each DHB has slightly different delegations policies, and because of this, time needs to be provided in any planning process to allow significant decisions to be taken back through individual DHB internal processes. This will be accommodated in planning processes.
- Where consensus agreement cannot be reached, the relevant group will agree to either:
  - Seek independent input or mediation to attempt to resolve any disagreement, or
  - Escalate the matter through the escalation pathway noted below.

Key determinants behind whether independent input/mediation/escalation will be used are the relevant group views as to:

- likelihood of successful resolution of the disagreement in a timely manner; and/or
- whether time constraints permit delay.

Where agreement cannot be reached, the parties will document their perspective of the matter to ensure the party or parties to whom the matter has been escalated are fully informed of the difference of views.

- Where independent input or mediation is chosen, the District Health Boards will appoint the independent adviser / mediator by consensus decision. In the event that consensus is not reached the Director General or nominee will be the default mediator.

#### Escalation Pathway

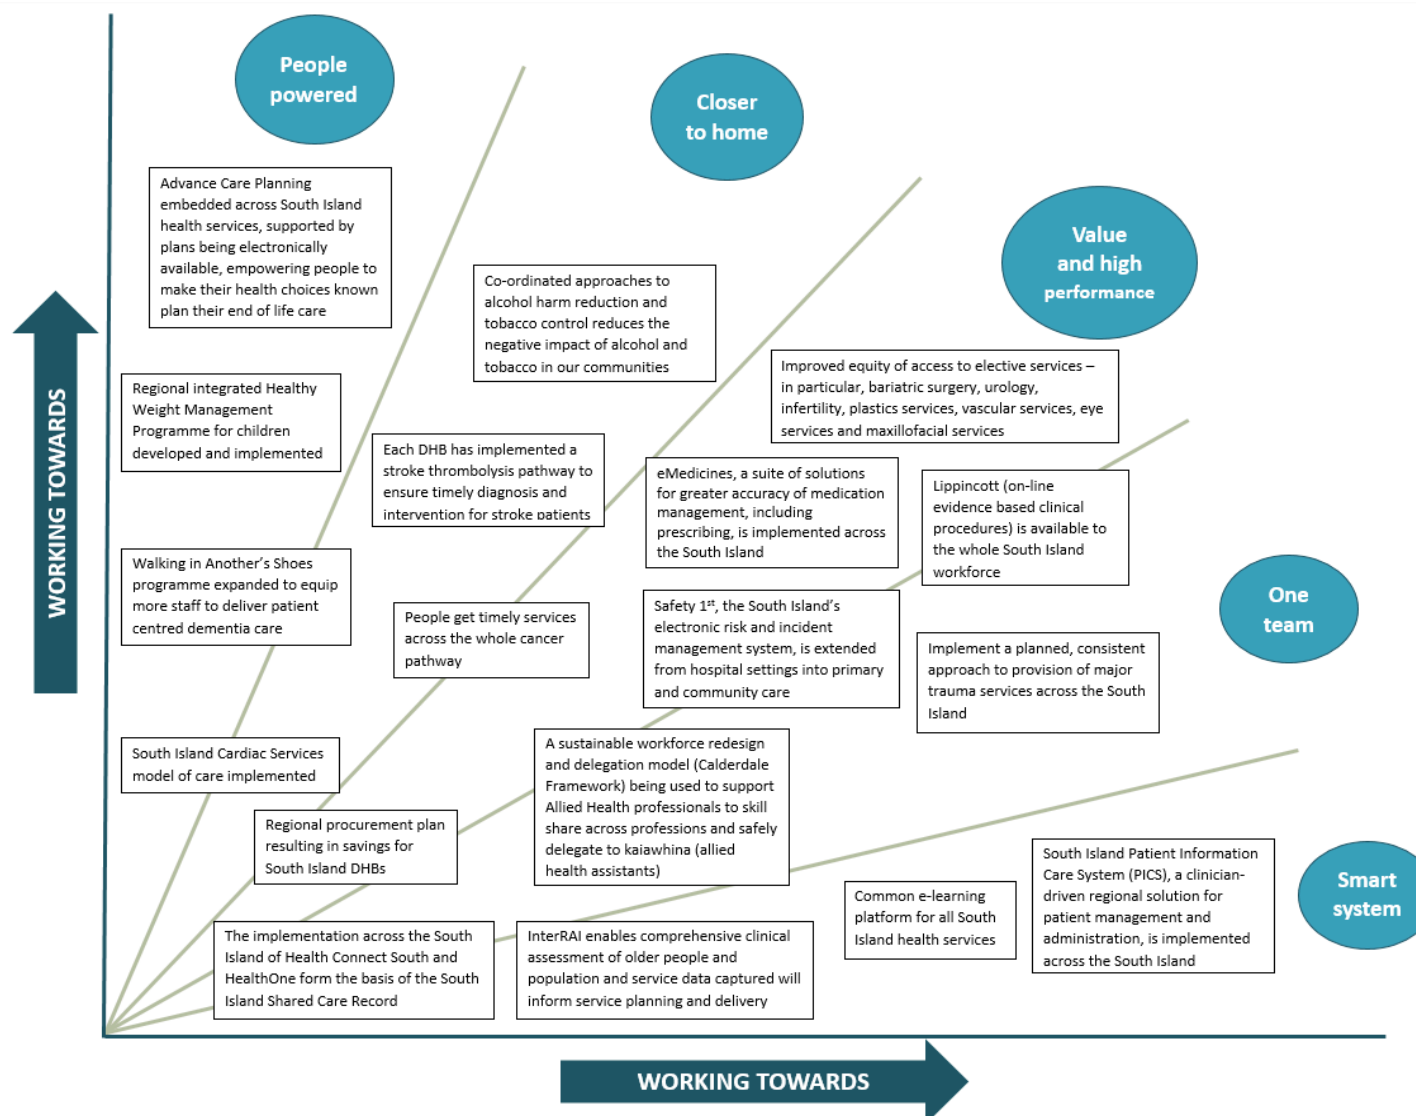

The following is the escalation pathway:

- Operational groups to Chief Executive group;
- Chief Executive Group to Chair Group; and
- Chair Group to Shareholding Minister

## Appendix 2 – South Island alignment with draft New Zealand Health Strategy

Similar to the Health Strategy's Roadmap of Actions, this diagram indicates how a small selection of the Alliance's activities support the themes identified in the Health Strategy

## Appendix 3 – Minister Letter of Expectation 2016

**Office of Hon Dr Jonathan Coleman**

Minister of Health  
Minister for Sport and Recreation  
Member of Parliament for Northcote

22 DEC 2015

Dear

**Letter of Expectations for DHBs and Subsidiary Entities 2016/17**

The Government is committed to improving the health of New Zealanders and continues to invest in key health services. In Budget 2015 Vote Health received an additional \$400 million, the largest share of new funding, demonstrating the Government's on-going commitment to protecting and growing our public health services.

**Refreshed New Zealand Health Strategy**

It is important that the health sector has a clear and unified direction. The refreshed New Zealand Health Strategy will provide DHBs and the wider sector with this direction, and sets a clear view of the future we want for our health system to ensure that all New Zealanders live well, stay well and get well.

While the Strategy is not yet finalised, DHBs need to be focussed on the critical areas to drive change that come out of the refreshed strategy. The draft covers five themes – people-powered, closer to home, value and high performance, one team, and smart system. The Strategy is supported by a Roadmap of Actions, which sets the direction for the next five years. I am aware that DHBs are already progressing work under some of the themes. I expect that this work will continue and, where possible, be accelerated over the coming year. If you are thinking about new initiatives, these should have a clear link to one or more of the five themes and the outcomes should be able to be clearly linked to the intent of the draft Strategy.

I thank you for your involvement to date in this work and finalised planning expectations will be provided to DHBs in the new year.

**Living Within our Means**

While the global economic environment continues to be challenging, DHB funding has been increased by around \$3 billion over the last seven years. While the health system could always use more resources, DHBs need to budget and operate within allocated funding and must have detailed plans to improve year-on-year financial performance. Your DHB's financial performance is currently tracking to plan for 2015/16. I trust that you will continue to consider where your DHB can make efficiency gains. You and your Board must monitor and hold your Chief Executive accountable against these expectations as keeping to budget allows investment into new and more health initiatives.

Improvements through national, regional and sub-regional initiatives must continue to be a key focus for all DHBs. With the establishment of NZ Health Partnerships Ltd, consistent with the shareholders' agreement, I expect all DHBs to work together to ensure successful implementation of the current programmes and to identify, develop and implement future opportunities.

### **Working Across Government**

Right now, a key focus of Government is vulnerable families. DHBs are already working closely with other social sector organisations to achieve sector goals in relation to the Government's Better Public Services initiatives, and other initiatives, such as Whānau Ora, Social Sector Trials, Prime Minister's Youth Mental Health Project and Healthy Housing. I expect DHBs to continue supporting cross-agency work that delivers outcomes for children and young people. I also expect that DHBs will keep me and the Ministry of Health informed of work they are undertaking with other sector agencies.

In line with this, the cross-government work programme on the Better Public Service Result One: Reducing long-term welfare dependence, is being expanded to include a focus on reducing unintended teenage pregnancies. I expect DHBs to commit to help deliver on this sub-focus in their 2016/17 annual plans.

### **National Health Targets**

All of the national health targets are very important for driving overall hospital performance, and have resulted in major improvements in the health outcomes of New Zealanders. Health target performance continues to improve, but DHBs must remain focussed on achieving and improving performance against the targets, particularly the Faster Cancer Treatment target.

I remain concerned about the overall pace of progress nationally on the Faster Cancer Treatment health target. Locally, \_\_\_\_\_ has shown good improvement since the target was introduced and this progress needs to continue to ensure that the DHB meets both the current year's goal of 85 percent and the increased goal of 90 percent by June 2017. Faster cancer treatment is a significant priority for the Government with almost \$63 million invested over the last seven years to deliver better, faster cancer care. Please ensure delivery of this health target is a priority for your DHB.

### **Tackling Obesity**

A key focus area for 2016/17 will be actions to reduce the incidence of obesity. The Childhood Obesity package of initiatives aims to prevent and manage obesity in children and young people up to 18 years of age, and includes a number of cross-agency activities. The core of the plan is the new childhood obesity health target, which is: by December 2017, 95 percent of obese children identified in the B4 School Check programme will be referred to a health professional for clinical assessment and other interventions.

I expect all DHBs to continue to show leadership in this area and to deliver on the new health target, and to identify other appropriate activities they can undertake to help reduce the incidence of obesity.

### **Shifting and Integrating Services**

Integrating primary care with other parts of the health service is vital for better management of long-term conditions, mental health, an aging population and patients in general. The pathways to achieve better co-ordinated health and social services need to be developed and supported by clinical leaders in both community and hospital settings. I expect DHBs to continue to move services closer to home in 2016/17, and DHBs need to have clear evidence of how they plan to do this.

### **Health IT Programme 2015-2020**

Health information systems have a crucial role to play to make the health system more sustainable, and to improve productivity, efficiency, and health outcomes. The Health IT

Programme 2015–2020 begins with a design phase over the next nine months and I expect DHB, PHO and primary care representatives to be part of the co-design process. Meanwhile, DHBs will need to complete current regional and national IT investments, such as the foundation programmes currently under way.

Please note that all DHBs must refresh their statements of intent (SOIs) for tabling in 2016/17 to reflect the key priority areas outlined above, and a health equity focus, and build these SOIs into their annual plans.

Keep in mind that the Budget 2016 process will clarify the priorities outlined in this letter and other Government priorities, and more information will be provided when available. Please share this letter with your clinical leaders and local primary care networks.

Finally, please note that the provisions of the Enduring Letter of Expectations continue to apply. The Letter can be accessed on the State Services Commission's website.

I would like to thank you, your staff, and your Board for your continued commitment to delivering quality health care to your population. I look forward to seeing your achievements throughout 2016/17.

Yours sincerely

A handwritten signature in blue ink, appearing to read 'Jonathan Coleman', with a stylized flourish at the end.

Hon Dr Jonathan Coleman  
**Minister of Health**

## Appendix 4 – Service Performance Priorities 2016-2019

The South Island Alliance ‘*Best for People, Best for System*’ Framework underpins the agreed actions to achieve: improved health and equity for all populations, improved quality, safety and experience of care and best value for public health system resources.

**Note – all workplans are tentative pending budgeting and resourcing decisions.**

### Clinical Services: Sustainability and Clinical Integration

#### Cancer services

##### *Reducing the burden of cancer*

|                |   |
|----------------|---|
| Lead CEO:      | <b>David Meates (Canterbury DHB)</b>  |
| Chair:         | <b>Dr Steve Gibbons, Consultant Haematologist (Canterbury DHB)</b>                |
| Clinical Lead: | <b>Shaun Costello, Clinical Director SCN, Radiation Oncologist (Southern DHB)</b> |

The Southern Cancer Network (SCN) has been formed to:

- Provide a framework that supports the linkages between the South Island DHBs, DHB specialist service providers, Non-Government Organisations (NGOs), Public Health Organisations (PHOs), and consumers.
- Coordinate implementation of the New Zealand Cancer Plan across the South Island.
- Provide a formal structure that supports improvement in coordination of population programmes for prevention and screening and the quality of treatment.

Five key focus areas set the direction of this work plan:

- South Island Faster Cancer Treatment
- South Island Cancer Service Coordination and Quality Improvement: Ensure people have access to services that maintain good health and independence and receive excellent services wherever they are. Services make the best use of available resources
- South Island Cancer Service reducing inequalities
- South Island Clinical Cancer Information System: Implementation of the South Island Clinical Cancer Information System (SICCIS): Robust cancer data and information sources are developed and shared that enable informed service development & planning decision-making
- Southern Cancer Network Support For National Projects: Ensure the tumour standards continue to promote quality of care and guide uniform standards of service provision across DHBs.

## Child Health services

*Working together to improve the health outcomes for children and their families living in the South Island*

Lead CEO: **Chris Fleming (Nelson Marlborough DHB)**

Clinical Lead: **David Barker, Paediatrician (Southern DHB)**

The Child Health SLA (CHSLA) has been formed to improve the health outcomes for children and young people of the South Island through:

- Transforming healthcare services, supporting clinical decision making and the shifting of activities closer to home and communities that children and young people live in.
- Working in partnership and linking with national, regional and local teams/groups to make (and assist the South Island DHBs to make) strategic health care decisions using a 'whole-of-system' approach.
- Supporting collaboration and integration across the South Island DHBs (primary, secondary and tertiary interfaces) and inter-sectorial groups/organisations (education, social welfare) to make the best of health resources.
- Balancing a focus on the highest priority needs areas in our communities, while ensuring appropriate care across all our populations.
- Establishing working groups to advise on and guide the development, delivery and monitoring of new initiatives across South Island children and young people's health services.

Six key focus areas set the direction of this work plan:

- Growing up Healthy - responding to national strategies for improving children's health outcomes and preventing child abuse.
- Young Persons Health - responding to the Prime Ministers youth Mental Health project
- Access to Child Health Services - supporting innovation, good practice and equity
- Successful Transition into Healthy Adulthood for Children with Lifelong Health Conditions
- To adequately address the Challenges of Behavioural Problems in Children and Young People
- Consumer Consultation

## Mental Health and Addiction Services

*Where people in Te Waipounamu/South Island need assessment, treatment and support to improve their mental health and well-being, they will be able to access the interventions they need from a range of effective and well integrated services. The Mental Health and Addictions Service Level Alliance will provide advice, guidance and direction to the mental health sector to strengthen integration, while improving value for money and delivering improved outcomes for people using services.*

Lead CEO: **Nigel Trainor (South Canterbury DHB)**

Clinical Lead: **Dr David Bathgate, Consultant Psychiatrist ( Southern DHB)**

The Mental Health and Addiction SLA (MHSLA) has been formed to provide advice, guidance and direction to the South Island mental health sector through:

- Best integration of funding and population requirements for the South Island.
- Providing an integrated service across the continuum of primary, community, secondary and tertiary services.

Ten key focus areas set the direction of this work plan:

- Alcohol and Other Drug Services
- Workforce
- People with low prevalence disorders
- Mental Health and Addiction Service Capacity for People with High and Complex Needs
- Youth Forensic Service Capacity and Responsiveness
- NGO provision
- Māori Mental Health
- Access to the range of Eating Disorder Services
- Adult Forensic Services
- Perinatal and Maternal Mental Health Service options as part of a Service Continuum

## Health of Older People services

*Best healthcare for older people everywhere in the South Island*

Lead CEO: **Chris Fleming (Nelson Marlborough DHB)**

Clinical Lead: **Dr Val Fletcher (Canterbury DHB)**

The Health of Older People SLA (HOPSLA) has been formed to lead the development of health and support services for older people across the South Island through:

- Developing sustainable models of care and systems for the delivery of quality health services for older people.
- Providing expertise and guidance around delivery of service to the South Island population over 65 (to those close in age and need).

Five key focus areas set the direction of this work plan:

- Dementia Services
- Restorative Model of Care
- Comprehensive Clinical Assessment (InterRAI)
- Falls Prevention & Fracture Liaison Service
- Advance Care Planning

## Palliative Care Services

*High quality, person centred, palliative and end of life care available to the population of the South Island, according to need and irrespective of location.*

Clinical Lead: **Kate Grundy, Consultant Physician in Palliative Medicine (Canterbury DHB)**

The Palliative Care Workstream has been formed to promote the development of and equitable access to a high quality palliative care integrated system for all people across the South Island through:

- The development of an integrated palliative care system, and multidisciplinary workforce across the South Island.
- An integrated system approach to local and South Island Palliative care linkages across the spectrum of services and providers to benefit the patient journey.

Four key focus areas set the direction of this work plan:

- Information Technology and Services
- Hospice and Hospital Palliative Care Services
- Primary and Community Care
- Networking and Engagement

Palliative Care is a workstream within the Health of Older People Service Level Alliance

## Cardiac Services

*South Island people enjoy quality of life and are prevented from dying prematurely from heart disease.*

Lead CEO: **David Meates (Canterbury DHB)**

Clinical Lead: **Dr David Smyth, Cardiologist & Clinical Director of Cardiology (Canterbury DHB)**

The Cardiac Services Workstream has been formed to provide regional leadership across the South Island Cardiac continuum of care through:

- A supported and planned approach of coordination and collaboration across the delivery of service.
- Reducing inequalities in access to cardiology services across the South Island.
- Enhancing the quality of cardiac health services across the South Island.
- Utilising common referral, prioritisation and condition management tools.
- Ensuring the sustainable management of cardiac services in the South Island.

Nine key focus areas set the direction of this work plan:

- South Island Model of Care
- Equity of Access
- Meeting National Indicators
- Heart Failure
- Workforce Training
- Minimum Facilities Guidelines
- Transporting of Cardiac Patients

## Elective Services

### *Sustainable, equitable elective services for South Islanders*

Sponsor: **General Managers Planning and Funding (South Island DHBs)**

**Chief Operating Officers (South Island DHBs)**

The South Island Alliance Elective Services Workstream is overseen by GMs Planning & Funding and Hospital General Managers, while each area of focus is supported by a work group that is clinically led. The Elective Services Workstream will:

- Explore elective service delivery across the South Island focussing on:
  - Population need and projections
  - Options to support clinically and financially sustainable service delivery into the future.
- Take a health system approach, and analyse secondary and tertiary referral elective services (variability of delivery, capacity, capability, sustainability)
- Prioritise services for attention to future configuration and delivery of elective health services across the South Island, using clinical and management tools such as HealthPathways, consistent systems and processes

Two key focus areas set the direction of this work plan:

- Regional/Sub-regional collaboration in:
  - Inter-district flows
  - Urology
  - Bariatric surgery
  - Cardiac model of care
  - Infertility
  - Plastics services
  - Vascular services
  - Eye health services
  - Maxillofacial services
- Reducing disparities

| 9                            | Identify baseline for Maori access (current and evidence) in selected priority areas.                             | Q2, Q4            |                       |                       | Electives Steering Group |
| 10                           | Collate and share innovations in the selected service areas via best practice documents and use of HealthPathways | Q2, Q4            |                       |                       | Each project group       |

### Work supported by the Elective Services Workstream

The Elective Services Workstream is committed to supporting work led by other SLAs/Workstreams or individual DHBs where appropriate. In particular, the Workstream will support South Island DHBs to deliver timely care to their patients and meet the Elective Services Health Target through collaboration and sharing of best practice to address and overcome issues as they arise. The work on inter-district flows is an example of this.

| National and regional initiatives supported by the Elective Services Workstream, but led by other SLAs/Workstreams or individual DHBs   |  |

| <b>Improve access to elective services</b><br>Delivery against agreed volume schedule, including elective surgical discharges, to deliver the Electives Health Target<br><i>Owner: Individual South Island DHBs</i><br><i>Reported: Individually by the South Island DHBs quarterly</i>   |  |
| <b>Maintain reduced waiting times for elective first specialist assessment and treatment</b><br>Elective Services Patient Flow Indicators expectations are met, and patients wait no longer than four months for first specialist assessment and treatment, and all patients are prioritised using the most recent national tool available.<br><i>Owner: Individual South Island DHBs</i><br><i>Reported: Individually by South Island DHBs quarterly</i> |  |

## Major Trauma services

*More patients survive major trauma and recover with a good quality of life*

Sponsor: **David Meates, CEO (Canterbury DHB)**  
**Lexie O'Shea, Executive Director of Patient Services (Southern DHB)**

Clinical Lead: **Dr Mike Hunter, Clinical Leader ICU (Southern DHB)**

The South Island Major Trauma Workstream has been formed to provide Regional Leadership across the Major Trauma continuum of care through:

- A planned and consistent approach to the provision of major trauma services across New Zealand.

Eight key focus areas set the direction of this work plan:

- South Island Major Trauma Services systems and processes agreed to support people surviving major trauma and recovering with a good quality of life
- Establishing systems to collect NZ Major Trauma Minimum Dataset and NZ Major Trauma Registry
- Clinical Leadership
- Workforce
- Networks
- Destination policies
- Inter hospital transfer protocols
- Spinal cord impairment action plan

## Public Health Services

*A healthier South Island population through effective regional and local delivery of core public health functions*

Sponsor: **Andrew Lesperance, GM Strategy, Planning and Alliance Support (Nelson Marlborough DHB)**

Clinical Lead: **Dr Ed Kiddle, Medical Officer of Health (Nelson Marlborough DHB)**

The South Island Public Health Partnership has been formed to:

- Sustain effective and efficient regional and local delivery of Ministry-funded Public Health Unit (PHU) services.
- Improve the interface and support between PHUs and other parts of the health system.
- Support population health approaches and planning.

Five key focus areas set the direction of this work plan:

- Māori
- Quality
- Environmental sustainability
- Health in all policies – environmental determinants of health
- Rheumatic fever

## Stroke Services

### *Delivering Organised Stroke Services - Best stroke care, everywhere*

Clinical Lead: **Dr John Fink, Clinical Director Neurology (Canterbury DHB)**

The South Island Stroke Workstream has been formed to:

- Support the implementation of organised stroke services locally and regionally across the South Island and thereby encourage consistency and sustainability in the provision and delivery of acute and rehabilitation stroke services (organised stroke services have been shown to improve the health outcomes of those who have a transient ischaemic attack (TIA) or stroke).

Four key focus areas set the direction of this work plan:

- Primary and secondary stroke prevention and reduced stroke related disability and mortality
- Access to high quality stroke services
- Rehabilitation and community stroke services
- Workforce education and training

## Hepatitis C Workstream

Clinical Lead: Dr Alan Pithie (**Canterbury DHB**)

The Hepatitis C Workstream is newly formed in order to design and implement integrated assessment and treatment services for Hepatitis C in the South Island.

The membership of the South Island Hepatitis C Workstream is confirmed, and an assessment of the clinical and diagnostic capacity and capability requirements in the South Island has been carried out.

The focus of this workplan will be to:

- Develop a clinical pathway for Hepatitis C patients (based on national developments on the availability of treatments and guidance from the Ministry of Health)
- Agree a business case for the ongoing provision of Hepatitis C services
- Supporting national awareness programmes and education for health professionals

## Quality and Safety Services

*Supporting South Island DHBs to make a positive contribution to patient safety and the quality of care*

Clinical Lead: **Mary Gordon, Executive Director of Nursing and Midwifery (Canterbury DHB)**

The Quality and Safety SLA has been formed to:

- Lead, advise and make recommendations to support and coordinate improvements in safety and quality in health care for the South Island DHBs.
- Identify and monitor initiatives that support improvements in national health and safety indicators.
- Report on safety and quality, including performance against national indicators.
- Share knowledge about and advocate for, safety and quality.

Five key focus areas set the direction of this work plan:

- Infection Prevention and Control
- Partners in Care
- Clinical Governance
- Promoting safety frameworks – Safety 1<sup>st</sup>
- Emerging priorities

## South Island Information Services

|                     |   |
|---------------------|---|
| Lead CEO:           | <b>Nigel Trainor (South Canterbury DHB)</b>   |
| Clinical Lead:      | <b>Andrew Bowers, Medical Director, Information Technology &amp; Physician (Southern DHB)</b> |
| Programme Director: | <b>Paul Goddard (South Island Alliance Programme Office)</b>                                  |

Information Technology provides the platform to support improved information sharing that enables new models of care and better decision making. Well-designed Information Technology systems will help the South Island to work smarter to reduce costs, support care pathways and give patients better, safer treatment. Greater reliance on technology requires effective management of Information Technology investments, implementations and ongoing operations. Sustained investment in Information Technology is one of the ways to manage increasing demand with limited resources.

The Information Services, Service Level Alliance has been formed to:

- Oversee the Information Services portfolio of work
- Provide overarching governance to the South Island Information Technology programme and projects
- Provide a point of escalation for the resolution of issues if the Programme or Projects vary from planned time, cost or scope

The Information Services, Service Level Alliance is implementing an information supported clinically led approach to patient care. With guidance from the National Health IT Board, the Information Services, Service Level Alliance has developed a portfolio of projects and programmes. Initial emphasis has been on establishing the regional platform by the systematic replacement of our legacy systems with the standardised regional solutions of Health Connect South, HealthOne, South Island Patient Information Care System, eReferrals Management and eMedicines Management. As these projects begin to transition from implementation into the business as usual phase the Information Services, Service Level Alliance can begin to implement additional building blocks to provide a foundation platform to support the delivery of care across the whole system.

The continued implementation of the portfolio is outlined within this Health Service Plan. This has been developed into a long term plan to address the priorities that the Alliance has identified. The 2016-17 Information Services Service Level Alliance workplan has been developed in line with the Ministry of Health's five year (2015-2020) Health IT Programme focus areas.

Four key focus areas set the direction of this work plan:

- **eHealth Records**
- **Digital hospitals**
- **Health Data**
- **Preventive Care**

The South Island is progressing the implementation of electronic solutions across the whole of the South Island health system that will provide better, safer, more efficient healthcare.

The IS SLA programme of work is supporting the vision of enabling clinicians and health providers to have access to health information where and when they need it this will support clinical decision making at the point of care. Across the South Island we are working to actively implement well-designed, easy to use solutions, we are developing these in consultation with our clinical leaders to support clinical workflow requirements, linked to smarter, safer health care delivery.

The IS SLA recognise that for information sharing and integrated services to work well it takes a team approach across the whole of the health system. As a core component of the alliance model we are clinically driven and supported by strong leadership and working in partnership with patients and vendors.

The IS SLA outcomes for implementing health informatics solutions is that they must ensure that people wait less, no wasted resource and that people are protected from harm or needless death.

As part of the SI commitment to delivering on the Minister of Health's<sup>4</sup> electronic health record vision the IS SLA programme of work will enable and support:

- Quality and productivity benefits to be realised through rationalising and eliminating duplication and replication of patient information across multiple systems and services through the consolidation and delivery of a single SI unified electronic health record;
- Creation of the SI unified electronic health record, that physically consolidates health information in one place, will improve decision support and care coordination especially for complex patients with multiple long-term conditions;
- A whole of system approach Primary Care will be incorporated into the SI unified electronic health record;
- The implementation of the eMedicines programme the SIA will enable the highest benefits in terms of patient safety and quality;
- The integration of consumer Portal access into the SI health system to deliver care closer to home. This leverages the ability to serve up information from a physical repository in real-time.

**Note – the workplan is tentative pending budgeting and resourcing decisions.**

## South Island Workforce Development Hub

Lead CEO: **David Meates, Canterbury DHB**

Clinical Lead: **Mary Gordon, Executive Director of Nursing and Midwifery (Canterbury DHB)**

The South Island Workforce Development Hub (SIWDH) works with the South Island health whole of sector to improve workforce development, education and training across the South Island to better meet the health needs of the South Island population. This is achieved by:

- Supporting innovative workforce development to ensure health professionals work to their full scope of practice in the new and emerging models of patient care with the support of an appropriately trained kaiawhina<sup>1</sup> (unregulated) workforce
- Strengthening the education and training networks across the South Island, focusing on enhancing and sharing innovative and multi-disciplinary approaches to healthcare delivery through effective education and training processes
- Collaborating with the other Regional Workforce Development Hubs and Health Workforce New Zealand to share workforce development ideas and initiatives and by participating in national and regional fora.

The work plan for 2016-17 builds on the work of the SIWDH workgroups, which involve over 120 clinicians from across health in the South Island. Further work to identify measures is ongoing and where appropriate these will be noted in the quarterly reports.

The areas of focus for 2016-17 are:

- Build and align the capability of the workforce to deliver new models of care
- Improve the sustainability of priority (vulnerable) workforces
- Grow the capacity and capability of Māori in the health workforce
- Grow the capacity and capability of Pacific People in the health workforce
- Optimise enablers to support workforce development
- Optimise the capacity and capability of the health workforce
- Strengthen health leadership through regional collaboration

This includes the establishment of a South Island &amp; Midland regional Lippincott palliative care expert group which includes Hospice and aged residential care nurses in collaboration with the South Island Palliative Care workstream.</li> <li>• Medical physicists' recruitment &amp; retention in the South Island.</li> </ul> |

## Support Services

*Regionally consistent support functions enable the best clinical care at the best value for money.*

Lead CEO: **David Meates (Canterbury DHB)**  
 Clinical Lead: **Dr Geoff Shaw, Intensive Care Specialist (Canterbury DHB)**  
 Chair: **Jock Muir, Director, Strategic Projects (Canterbury DHB)**

The Support Services SLA (SS SLA) has been formed to:

- Secure better savings by aggregating procurement requirements, improving purchasing power and reducing procurement costs.
- Align with national or other regional activity to deliver the best outcomes for cost and services.
- Procure high value consumable product group, Assets (CAPEX) and non-clinical Services.

Eight key focus areas set the direction of this work plan:

- Procurement and savings
- Building networks
- Project and savings collaboration with other Workstreams of the SLA
- SS SLA maintains strong functioning, clinically-led workstreams
- Manage change in conjunction with national agencies for local and regional benefits
- Incorporate sustainability practices
- Cultural and consumer input
- St John Regional agreement for Patient Transfer service
