RE Official Information Act request CDHB 10600

I refer to your email dated 6 May 2021 requesting the following information under the Official Information Act from Canterbury DHB regarding vaccine misinformation. Specifically:

- **Since February 1 2021, copies of any reports, documents, memoranda, and correspondence, both internal and external, regarding misinformation about Covid-19 vaccines/vaccination, including any reports of examples of misinformation, any official reaction to such examples or the problem of misinformation as a whole, and the possible impact of such misinformation.**

Please refer to **Appendix 1** (attached) for correspondence (both internal and external) regarding misinformation about Covid-19 vaccines/vaccination.

Note: we have redacted information under the following sections of the Official Information Act.

Section 9(2)(a) – “...to protect the privacy of natural persons, including those deceased”.

Section 9(2)(b)(ii) “...to protect the commercial position of the person who supplied the information, or who is the subject of the information”.

Section 9(2)(g)(i) “... to maintain the effective conduct of public affairs through the free and frank expression of opinions.”

We have also removed information we believe to be ‘Out of scope’ of your request.

I trust this satisfies your interest in this matter.

You may, under section 28(3) of the Official Information Act, seek a review of our decision to withhold information by the Ombudsman. Information about how to make a complaint is available at www.ombudsman.parliament.nz; or Freephone 0800 802 602.

Please note that this response, or an edited version of this response, may be published on the Canterbury DHB website after your receipt of this response.

Yours sincerely

A handwritten signature in blue ink, appearing to read 'R La Salle', is positioned above the typed name.

Ralph La Salle
Acting Executive Director
Planning, Funding & Decision Support

DHB Comms Managers 9(2)(a)

Subject: RE: COVID -19 misinformation[EXTERNAL SENDER]

Kia ora colleagues

Thanks for sharing that 9(2)(a). Below is a flyer that's been circulated widely on the West Coast.

We've asked staff to report it to CERT as per the MoH/AOG Covid Key Messages – so the spiel below went in the staff email newsletter on Monday.

I've also been in touch with DPMC, to get approval to run some ads, and trying to clarify how to brand it and ascertain if anything's planned nationally.

Will keep you posted on that one. The draft wording is below.

Global email content:

NEW – Reporting COVID-19 and vaccine misinformation

We have been made aware that on the Coast there is a person or persons dropping leaflets into mail boxes regarding COVID-19 and the vaccine. The Ministry of Health and our Medical Officer of Health have been advised of this information. Thank you to everyone who has brought this to our attention.

If you become aware of any campaigns or information targeting New Zealanders and asking for personal information or payment for receiving the COVID-19 vaccine, please report this misinformation to covid@ops.cert.govt.nz (Subject: COVID-19 scam) or call 0800 237 869.

Scams/misinformation of COVID-19 vaccine

- If you become aware of any campaigns or information targeting New Zealanders a information or payment for receiving the COVID-19 vaccine, please report it to CEI
- It's important to note the vaccine is free and at no point will you be asked to pay f the queue.
- Any communications about the vaccine will come from the Ministry of Health or if you receive any emails out of the blue asking for financial and personal details it is
- The best way you can help us stop these scams affecting New Zealanders is to rep: You can do this via CERT NZ's website: www.cert.govt.nz or by calling 0800 2378

ENDS

Draft copy for ad to run in The Messenger – Community Newspaper delivered to all households on the West Coast once a week.

WHERE DO YOU GO FOR ACCURATE INFORMATION ON COVID-19 VACCINATION?

We all need to work together to beat COVID-19.

Help us stop the spread of false or misleading information by only sharing content from official sources.

You can always find accurate and timely information on the Unite Against COVID-19 website www.covid19.govt.nz and the Ministry of Health website www.health.govt.nz or www.wcdhb.health.nz your local health provider.

The official social media channels are also updated frequently – follow *Unite Against COVID-19*, the *NZ Ministry of Health* and *West Coast DHB* on Facebook.

In terms of branding:

West dhb logo?

NZ govt logo?

Unite against covid logo?

Ministry of Health logo?

To be laid out in the new lavender and white stripey style?

Or do we just do this as a West Coast DHB 'ad'??

Vaccine UPDATE

The active ingredient seems to be messenger RNA. No previous vaccines have contained this. More accurately it is experimental gene therapy, not a vaccine.

With a survival rate of 99.997%, why do we need a vaccine?

The official report states that it will not stop you getting infected, nor stop you infecting others. You will still have to wear a mask and social distance. Multiple injections are required.

Adverse Reactions

Social media has many videos and reports of people with adverse reactions including death. Some claim the vaccine is far more deadly than the virus. Why aren't we hearing about this on TVNZ?

Dr Judy Mikovitz is the doctor who discovered the treatment for HIV. Her assessment of the 'vaccine' is that it will cause the immune system to go into a cytokine storm and attack bodily organs, when it next encounters a corona virus - such as the common cold.

Global Reset: "You'll own nothing, and you'll be happy"

The United Nations is offering this solution to the 'pandemic' and the 'global warming problem': Debt forgiveness. Relinquish ownership of everything to the banks - homes, cars etc. You will be given appropriate housing and basic income. The banks will employ everybody. Only approved people will be allowed to travel.

Billionaires will keep their private jets.

"A population living in fear is easy to control"

Businesses have been bankrupted, people have lost jobs. Lockdowns, no overseas travel, increased suicides, Government abusing powers.

COVID-19 UPDATE

Thousands of Doctors speak out

Great Barrington Declaration - over 50,000 medical personnel have signed in protest. NZ Covid Plan B, America's Frontline Doctors.

What the NZ Government is NOT telling us

The virus is no more deadly than the seasonal flu - and has reached the end of its life regardless.

Deaths worldwide in 2020 from respiratory illnesses, or any other cause, have been fewer than in recent years. No excess deaths, no pandemic anywhere in the world.

'Second waves' and 'new strains' are totally normal for a virus.

Lockdowns, wearing masks, staying inside and avoiding social interaction, are bad for your immune system. Eat well, get exercise and sunshine, stay fit, maybe take vitamins and zinc.

If you are high risk, taking an Ionophore is proven beneficial. This helps zinc enter the cell so it can shut down virus replication. Examples of zinc Ionophores are Quercetin, Ivermectin and Hydroxychloroquine. Deaths due to cancer and heart disease have been incorrectly recorded as Covid deaths. Deaths with Covid, not deaths from Covid.

Do your own research. Don't listen to the government or their paid-for media. Avoid CNN, Reuters, BBC, and 'fact checkers'.

Listen directly to the source and make up your own mind. Find others doing the same. Good commentators in NZ are Damien De Ment, Vinny Eastwood, Dr Dolores Cahill, Dr Sam Bailey (from NZ) and follow Greymouth Skeptics on Telegram.

Subject: FW: COVID -19 misinformation[EXTERNAL SENDER]

Hi team

Just a heads up that our aged care residents here in Wairarapa have been delivered this magazine.

I have requested a full copy, I have only been provided these two pages and am unsure what the rest of the publication contained (Covid or otherwise).

Have any of you had this do the rounds in your regions? Vaccination hesitancy is hard enough to tackle without this sort of "assistance."

Kind regards

Kia ora Karalyn

They're at it again.

This is very similar to what was hand-delivered to letter boxes in Greymouth and Hokitika earlier this year and even references a Greymouth group. It may be appropriate to place an ad in a local newssheet (if there is one) with references to where people can find evidence-based information about the vaccine as was done on the Coast.

Subject: New anti vaccination Campaign

Hi team

This anti-Vaccination guy is back... Attached is his latest pamphlet that has been put out in both Hokitika and Greymouth areas.

Outside of running the miss information ad again, what else do we have an hour toolbox that we could use to get correct information out to the public

RELEASED UNDER THE OFFICIAL INFORMATION ACT

COVID-19 UPDATE

Vaccine death rate is 40 times COVID death rate

Data from Israel (pop. 9 million) just completed the vaccine rollout.

"Anyone who is over 70 will probably sadly die within 2-3 years."

"If you are in your 30s, die within 5-10 years." [Dr Dolores Cahill]

Thousands of Doctors speak out

The COVID-19 'vaccine' is not a vaccine at all. It is an experimental gene therapy. It will not stop you getting infected, nor stop you infecting others. You will still have to wear a mask and social distance. Multiple injections are required.

With a survival rate of 99.997%, do we need a vaccine?

"It's unlike any other vaccine created before." Steve Anderson, FDA.

The active ingredient is messenger RNA. No previous vaccines have contained this, as they all failed the animal studies.

Nano-particle lipids shield the RNA so it can penetrate the cell wall.

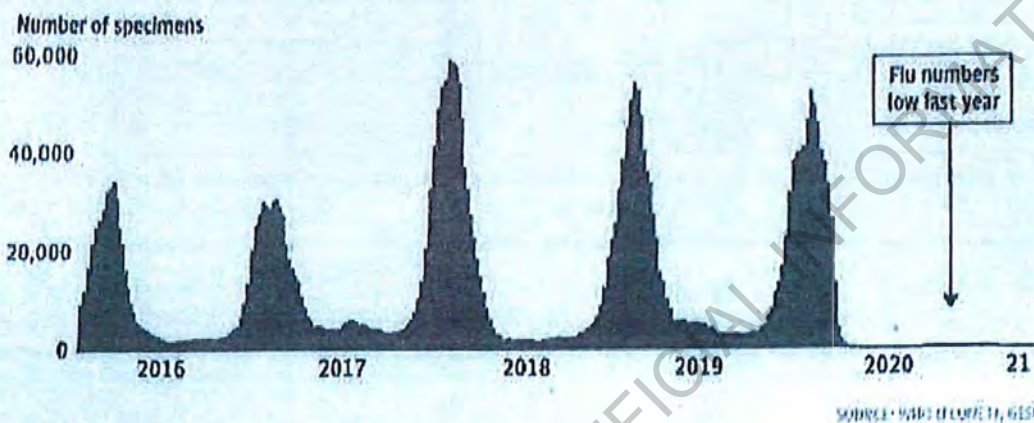

Adverse Reactions

There have been 5,000 deaths and 166,000 injuries from the 'vaccine'.

"Many experts are predicting a surge of life-threatening infections, inflammatory disorders and deaths. Of course, the blame will be placed on a mutant, virulent strain of the COVID-19 virus, rather than on a poorly tested experimental gene therapy." [Dr Steven Hotze]

BUPA [medical insurance UK] is not covering the 'experimental jab'

Global circulation of flu viruses

“They put the flu deaths in the COVID column!”

The virus is no more deadly than the seasonal flu - and has reached the end of its life regardless.

Deaths worldwide in 2020 from respiratory illnesses, or any other cause, have been fewer than in recent years. No excess deaths, no pandemic anywhere in the world.

Treatment – Ivermectin

“Death rate is reduced by 70-90%. Wherever it has been used in the world, they are back to normal life.”

“There is blood on the hands of the bureaucrats who have suppressed this life saving medication.” [Dr Ryan Cole]

Lockdowns, wearing masks, staying inside and avoiding social interaction, are bad for your immune system and mental health. Eat well, get exercise and sunshine, stay fit, maybe take vitamins and zinc.

“A population living in fear is easy to control”

Businesses have been bankrupted, people have lost jobs. Lockdowns, no overseas travel, increased suicides, Government abusing powers.

Subject: vaccinations

Hello Karalyn,

I am a [REDACTED] working at [REDACTED]. Thankyou for the communication regarding the rollout of the Covid 19 Vaccine for CDHB staff. As I am sure you know, Informed Consent is a tremendously important factor in all treatments offered by the CDHB. I count it my duty to give my patients all pertinent information required to make an informed decision wherever possible. I am very concerned that this principle is not being adequately considered with regard to the Covid Vaccine offered by the Ministry of Health to members of staff.

I have found it very disturbing indeed that very few of my colleagues are aware of some issues with the Pfizer Vaccine. There will be always be side effects to any treatment and sometimes these can be very severe. This doesn't necessarily mean we do not utilise a particular treatment option. It is a matter of balancing risk. I think everyone understands that. The Pfizer Vaccine is generally agreed to be a good option at treating Covid in the current crisis. However, if people are not informed as to particular risks they cannot make a truly informed decision about accepting it or not.

It is crucial to Informed consent that potential problems are admitted.

I attach a link below that articulates some concerns with the Pfizer vaccine that are absolutely not being shared by the CDHB. The author explains it much better than I, but, for example the following considerations are not being aired.

The Pfizer vaccine has only been approved under emergency legislation. Though this information is in the public realm, staff I speak to are really NOT aware of this and furthermore not aware of what this means.

Staff are generally not aware that the Vaccine has not undergone the rigorous testing that vaccines normally do (hence it is only approved under emergency conditions). Of course testing has been done, but not to the level normally expected. This testing

(in the USA as an example) is not expected to have been completed until 2023. This MUST mean there are risks that are being taken that are not normally taken. This must mean that any particular risk are just not known. None of the colleagues I speak to are aware of this. Furthermore, though this information is also in the public realm, people are generally unaware that this Pfizer Vaccine is not a vaccine as we traditionally know them. That is, it is through an RNA 'methodology'. The science of this is way above my head, however this much can be reliably said: RNA vaccines have never been successfully trialled anywhere, so anybody actually receiving the vaccine at this time is actually a 'volunteer' in a trial. Again this is information that people are generally unaware of.

It may well be that the Pfizer vaccine is a tremendous success in combatting Covid 19, and perhaps the scope of its side effects will be no different to any other vaccine. Lets hope so. But people cannot give true consent when information and knowledge is withheld from them.

The above information is currently being withheld. Perhaps this is an inadvertent omission, but from my conversations with those I work with I am convinced that most are actually grossly unaware of what they need to know to be fully consenting to treatment. It is the responsibility of the CDHB to very deliberate in informing its workforce (and of course patients). It is not good enough to simply publicise the positive aspects of a treatment. The CDHB must work harder to be fully transparent.

Of all the various ministries serving the nation, a Health Board should be leading all others in matters of consent that relate to health!

As I say, lets hope this vaccine is a tremendous success. But if it proved to be damaging in ways hitherto unknown, then as it stands, the CDHB would be rightly considered part of the problem.

Please consider this carefully. I would appreciate a prompt reply. I have Cc'd my Regional NZNO Council into this.

With thanks,

COVID-19 UPDATE

Vaccine death rate is 40 times COVID death rate

Data from Israel (pop. 9 million) just completed the vaccine rollout.

“Anyone who is over 70 will probably sadly die within 2-3 years.”

“If you are in your 30s, die within 5-10 years.” [Dr Dolores Cahill]

Thousands of Doctors speak out

The COVID-19 ‘vaccine’ is not a vaccine at all. It is an experimental gene therapy. It will not stop you getting infected, nor stop you infecting others. You will still have to wear a mask and social distance. Multiple injections are required.

With a survival rate of 99.997%, do we need a vaccine?

“It’s unlike any other vaccine created before.” Steve Anderson, FDA.

The active ingredient is messenger RNA. No previous vaccines have contained this, as they all failed the animal studies.

Nano-particle lipids shield the RNA so it can penetrate the cell wall.

Adverse Reactions

There have been 5,000 deaths and 166,000 injuries from the ‘vaccine’.

“Many experts are predicting a surge of life-threatening infections, inflammatory disorders and deaths. Of course, the blame will be placed on a mutant, virulent strain of the COVID-19 virus, rather than on a poorly tested experimental gene therapy.” [Dr Steven Hotze]

BUPA [medical insurance UK] is not covering the ‘experimental jab’.

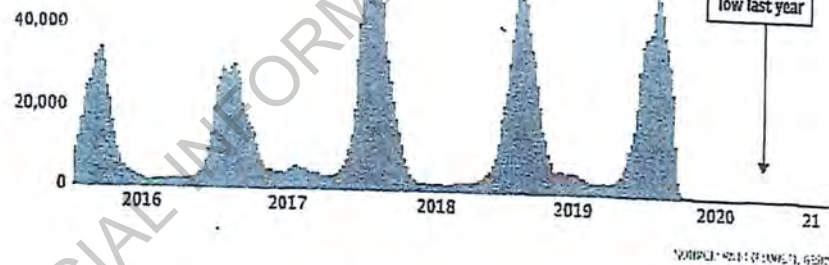

It’s thought it will make you sterile, but this has not been tested yet.

www.therealnews.nz for a free pdf of information. Over 89,000 medics are speaking out. NZ Covid Plan B, America’s Frontline Doctors.

RELAX! GOOD NEWS

Global circulation of flu viruses

Number of specimens
60,000

“They put the flu deaths in the COVID column!”

The virus is no more deadly than the seasonal flu -and has reached the end of its life regardless.

Deaths worldwide in 2020 from respiratory illnesses, or any other cause, have been fewer than in recent years. No excess deaths, no pandemic anywhere in the world.

Treatment – Ivermectin

“Death rate is reduced by 70-90%. Wherever it has been used in the world, they are back to normal life.”

“There is blood on the hands of the bureaucrats who have suppressed this life saving medication.” [Dr Ryan Cole]

Lockdowns, wearing masks, staying inside and avoiding social interaction, are bad for your immune system and mental health. Eat well, get exercise and sunshine, stay fit, maybe take vitamins and zinc.

Subject: concerns

Hello,

I am [REDACTED] working [REDACTED] [REDACTED] I am currently declining the offer of the Covid Vaccine. I recently forwarded some of my concerns to Karalyn van Deursen. She has (I understand) forwarded my e mail to the Clinical Lead of the rollout programme but I have yet to receive acknowledgement of receipt of this. I realise this is an incredibly busy time, for obvious reasons, but I would appreciate some response to my concerns.

As I have said previously we are duty bound to provide all information pertinent to any treatment to facilitate Informed Consent. We are rightfully obliged to be proactive with this in respect of our patients, and not simply assume that knowledge that is in the public realm will be fully accessed by those who need it. Of course this translates equally to all CDHB staff, who by virtue of accepting the vaccine treatment all become patients themselves. I believe the CDHB is being woefully inadequate in its attempts to fully inform potential recipients of the Covid Vaccine.

There are some simple facts of the situation that people are unaware of. Every time I respectfully mention these to my colleagues, I am immediately met with the statement "I didn't know that". This persuades me that some information is being ignored.

People are generally unaware that the Pfizer Covid Vaccine is only approved under provisional status. Similarly in the US and the UK. The CDHB is omitting to mention the significance of provisional approval. It comments that testing has been done, and indeed 'much testing' and speaks of the co-operation of different nations in speeding up the process. However, 'provisional' or 'emergency' approval and associated legislation means something other than the assumed 'positive'. What would be considered standard procedure for 'full' approval will not be completed in the USA for example until 2023. This means we now have a gap of at least 18 months before full approval could even be considered. 18 months of hitherto unknown side effects of the Vaccine. It is impossible to 'speed up' approval for what is necessarily in the future. We cannot know the long term effects until our research actually spans the 'long term'. This is particularly crucial in respect of the current treatment, because the MRNA technology of the Pfizer and other vaccines is experimental. Animal studies e.g. using this technology have so far proved disastrous and generally fatal to its subjects in the long term. Naturally many people will accept the vaccine knowing these things anyway, balancing one risk against another, but one must be aware of the risks to 'balance them'. Furthermore since 'provisional' authority is given this genuinely means that recipients of the vaccine are in effect participating in a type of clinical trial. But I do not see this being explained.

These are not the concerns of a 'conspiracy theorist' but of a concerned ^{9(2)(a)} seeing a treasured concept like 'Informed Consent' being ignored. There are many other things that could be said, but I will limit my concern at this stage to that notion of Informed Consent. These are very troubling times. I do pray that the vaccines given will indeed prove to be as effective as we hope and do not cause other problems. However if we do not explain the limitations of the knowledge surrounding them before injecting people, then subsequent problems that might arise after doing so, are attributable not only to the vaccine but also the giver of it.

I would value some dialogue about how the CDHB could improve its information sharing on this subject.

With respect

Subject: RE: concerns re vaccine

Thankyou Haidee for your reply and taking time to examine some of the details of my concerns at this busy time.

Thankyou too for correcting my assertion that the Pfizer injection is approved under 'Emergency' legislation here in NZ when indeed it is not.! I was mistakenly applying the US terminology.

However...it is approved only 'provisionally' under NZ Law. The Medicines Act as you cite 23 (1) is 'provisional' approval, which to me seems essentially equivalent to the Emergency Legislation in the

US and the EU. It is not equivalent to otherwise full authority. The Legislation also cites that, "it is desirable that the medicine be used on a restricted basis for the treatment of a limited number of patients". Clearly this 'desirability' has been totally ignored. In no way can the 100,000's receiving the injection in NZ be 'limited' or 'restricted'.

You cite accurately I am sure the numbers past and present that have been part of the research/study into the effectiveness of the Covid 19 vaccines. But it remains true that 'animal studies' of Mrna vaccine technology have proved disastrous in the past and long term studies (especially with vulnerable humans) have simply not been done yet.

If 'provisional' approval was being adhered to as the Law suggests then any future problems that might come to light will have effected only a 'limited' number of people. But here and now, a single medication is potentially given to everybody in the nation! If something proves to be amiss with it, then this will have untold consequences.

The Law concerning 'provisional approval' is there for good reason, to protect us. But we as the CDHB are joining with the Government in totally ignoring this check and balance!

You say we as New Zealanders are benefitting from the extended use (and trials) of the vaccine in other parts of the world, when the case can equally be made that we have joined other nations in a very grand and dangerous experiment.

Of all the nations in the world, with our excellent Covid status, this is the perfect place to truly wait and see if there are long term problems with the vaccines...but we are going ahead regardless. I truly hope my concerns are groundless, but meanwhile I marvel at the current license to experiment with people's health.

9(2)(a)

Hi 9(2)(a) thanks for taking the time to email, and to follow up. As you mention, it is a considerably busy time for the team.

We've responded to your points in the previous version of your email, which I copy below. Our responses are marked in [blue](#).

Warm regards,

Haidee Scott

Senior Communications Advisor – COVID-19 Lead

Canterbury District Health Board

Level 1, 32 Oxford Tce, Christchurch, 8011

www.cdhb.health.nz

I am a 9(2)(a) working at 9(2)(a) 9(2)(a). Thankyou for the communication regarding the rollout of the Covid 19 Vaccine for CDHB staff.

As I am sure you know, Informed Consent is a tremendously important factor in all treatments offered by the CDHB. I count it my duty to give my patients all pertinent information required to make an informed decision wherever possible.

I am very concerned that this principle is not being adequately considered with regard to the Covid Vaccine offered by the Ministry of Health to members of staff.

I have found it very disturbing indeed that very few of my colleagues are aware of some issues with the Pfizer Vaccine. There will be always be side effects to any treatment and sometimes these can be very severe. This doesn't necessarily mean we do not utilise a particular treatment option. It is a matter of balancing risk. I think everyone understands that. The Pfizer Vaccine is generally agreed to be a good option at treating Covid in the current crisis. However, if people are not informed as to particular risks they cannot make a truly informed decision about accepting it or not.

It is crucial to Informed consent that potential problems are admitted.

I attach a link below that articulates some concerns with the Pfizer vaccine that are absolutely not being shared by the CDHB. The author explains it much better than I, but, for example the following considerations are not being aired.

The Pfizer vaccine has only been approved under emergency legislation. Though this information is in the public realm, staff I speak to are really NOT aware of this and furthermore not aware of what this means.

This is incorrect. The Comirnaty (COVID-19 mRNA vaccine) (Pfizer-BioNTech) vaccine has been approved for use in New Zealand under section 23 of the Medicines Act, with conditions. There may be confusion because the labels on the vaccine vials state that they are for use under Emergency Use Authorization. This statement has been included to meet the requirements of the US Food and Drug Administration (FDA) but is not relevant or applicable to the vaccine's use in New Zealand.

Staff are generally not aware that the Vaccine has not undergone the rigorous testing that vaccines normally do (hence it is only approved under emergency conditions). Of course testing has been done, but not to the level normally expected. This testing (in the USA as an example) is not expected to have been completed until 2023. This MUST mean there are risks that are being taken that are not normally taken. This must mean that any particular risk are just not known. None of the colleagues I speak to are aware of this.

This is also incorrect. The process to develop COVID vaccines is fast-tracked while maintaining the highest standards. Given the urgent need to stop the pandemic, pauses between steps, often needed to secure funding, have been shortened, or eliminated, and in some cases, steps are being carried out in parallel to accelerate the process, wherever that is safe to do. COVID-19 vaccine developers have also issued a joint pledge not to seek government approval for their vaccines until they've been proven to be safe and effective.

The Comirnaty (COVID-19 mRNA vaccine) (Pfizer-BioNTech) vaccine completed its phase 3 study (the last phase) in late 2020. This phase 3 study included more than 40,000 participants. Since then, effectiveness and safety reports for 10s of millions of people have been published. This, and the other COVID vaccines are subject to intensive on going safety monitoring (this monitoring identified the rare association of clotting disorders with the Oxford vaccine).

Furthermore, though this information is also in the public realm, people are generally unaware that this Pfizer Vaccine is not a vaccine as we traditionally know them. That is, it is through an RNA 'methodology'. The science of this is way above my head, however this much can be reliably said: RNA vaccines have never been successfully trialled anywhere, so anybody actually receiving the vaccine at this time is actually a 'volunteer' in a trial. Again this is information that people are generally unaware of.

mRNA vaccines have been around since the early 1990s, and have been successfully trialled – but not phase 3 trials – until now. As you'll be aware, 1.2 billion doses of COVID-19 vaccines (admittedly, not all mRNA, but a large proportion are) have now been administered around the world, including 304,900 doses in New Zealand. New Zealanders are the beneficiaries of people participating in the vaccine trials in other countries.

It may well be that the Pfizer vaccine is a tremendous success in combatting Covid 19, and perhaps the scope of its side effects will be no different to any other vaccine. Lets hope so. But people cannot give true consent when information and knowledge is withheld from them.

The above information is currently being withheld. Perhaps this is an inadvertent omission, but from my conversations with those I work with I am convinced that most are actually grossly unaware of what they need to know to be fully consenting to treatment.

It is the responsibility of the CDHB to very deliberate in informing its workforce (and of course patients). It is not good enough to simply publicise the positive aspects of a treatment. The CDHB must work harder to be fully transparent.

Canterbury DHB is following the informed consent process as directed by the Ministry of Health and the Immunisation Advisory Centre. You can find the IMAC guidelines here:

https://www.immune.org.nz/sites/default/files/IMAC_COVID_ED_Screen%2BGuide-EMAIL3.pdf

Of all the various ministries serving the nation, a Health Board should be leading all others in matters of consent that relate to health!

As I say, lets hope this vaccine is a tremendous success. But if it proved to be damaging in ways hitherto unknown, then as it stands, the CDHB would be rightly considered part of the problem.

Please consider this carefully. I would appreciate a prompt reply. I have Cc'd my Regional NZNO Council into this.

Subject: Unlawful

For the attention of Haidee Scott

Further to my previous communication with you:

You may be aware that the High Court in Wellington yesterday ruled that it can be 'reasonably be argued' that the Law has been ignored and broken with the current Covid Vaccine rollout.

As the Legislation indicates, the current provisional approval under the Medicines Act suggests that medicines should be given to a 'limited' number of people.

This is obviously to protect the general population from potential side effects that come to light in the period of provisional approval.

The government has let down the populace in its wilful ignoring of the advice given under the Medicines Act.

Perhaps you too as the Covid rollout team are equally culpable? How do you explain this? Rather than dispensing to a limited number of people you proudly report your 'success' in delivering it to as many people as you can.

It is possible of course that there will be no long term problems with the vaccine, but that does not excuse you at this time from not following advice contained in the appropriate legislation.

If the vaccine proves damaging in the long term then you will be responsible, together with the Ministry and the government for the health problems that occur.

Please reconsider what you are doing. I am quite sure you mean to do the right thing, and that you believe you are doing the right thing, but there is a reason that provisional/conditional approval was granted and it is vital that the appropriate advice is followed.

The governments approach to this appears to be to draft and rush through a Bill to change the Law that it has just transgressed! Is this the way the law is to be treated? Is this a reasonable and democratic response? Shouldn't the

appropriate course of action be to apologise for potentially putting people at risk and formulate a plan which is better suited to the risks being taken?
